

## Andover Audio Introduces Spinbase Powered Speaker Base for Turntables

**North Andover, MA – October 31, 2019 – Spinbase** is a low-profile powered speaker system that flexibly supports turntables and record players. It is designed for vinyl enthusiasts desiring a compact, yet high-quality speaker solution to complete their turntable setup, without the complexity and space demands of extra speakers.

### **Feedback Elimination Technology**

Turntables are sensitive to speaker vibrations, which can cause acoustic feedback – the rumble you hear when your turntable is too close to speakers. Spinbase uses **Isogroove™**, an innovative technology originally developed for Andover’s Model One Record Player, which eliminates feedback. This allows Spinbase to be placed directly underneath a turntable, serving as both an elegant platform and a wide-range loudspeaker system, free of noise.

### **Minimalist Design**

Spinbase uses a clean, no-nonsense design that seamlessly matches your favorite turntable. The main control is a single, large knob, which turns Spinbase on, and allows for fine volume adjustment. Additional bass and treble controls are placed on the back panel, allowing listeners to custom EQ Spinbase to their desired sound. A headphone out is provided for quiet listening.

## **270° Audio System**

Traditional turntable/speaker setups create "sweet spots", whereas **Spinbase** creates a large, balanced soundstage that fills the room. This is achieved by a clever arrangement of two woofers and two tweeters, which produce an expansive stereo-image with audio performance that matches smaller bookshelf speakers. Additionally, **Spinbase** significantly improves the sound quality, loudness (SPL), and range of a popular record players.

## **Wireless Bluetooth 5.0 Connectivity**

Users can wirelessly stream music via low-latency Bluetooth 5.0 to **Spinbase**. You can also connect another source, such as a wireless streamer or CD player, making **Spinbase** a complete analog and digital entertainment system.

**Spinbase** is available to backers on [Kickstarter](#) during the month of November, 2019.

## **About Andover Audio**

Since its formation in 2012, Andover Audio has provided its design and manufacturing services to the most recognized brands in automotive, telecommunications, and high-performance consumer audio. Andover is now focusing its award-winning approach on its own line of products that artfully blend premium audio technologies with distinctive design. Andover's first products begin the company's plan to become the next full-suite home entertainment company.

The Andover team, led by former Cambridge SoundWorks General Manager Rob Mainiero, is a collection of audio experts and engineers from an iconic lineup of companies, including Apogee Acoustics, Acoustic Research, Harman, Bose and a/d/s/.
