

Healthier chairs of choice, for your indoor air quality assurance.

Choose a **GREENGUARD Certified** chair.

What is GREENGUARD Certification?

Interior products (like office chairs) have a significant impact on indoor air quality, & can emit hundreds of chemicals into the air that building occupants breathe. **GREENGUARD Certification** helps provide assurance that products are low-emitting, & contribute to healthier interiors.

Representative samples of products that have achieved **GREENGUARD Certification** have been tested & certified to meet some of the world's most rigorous, third-party chemical emissions standards, helping reduce indoor air pollution & the risk of chemical exposure while aiding in the creation of healthier indoor environments.

GREENGUARD Certification is an internationally recognised product emissions certification & labeling program for manufacturers of low-emitting indoor products, furnishings, & materials.

Products can be certified under two different standards: **GREENGUARD or GREENGUARD Gold**

GREENGUARD Certification is the first voluntary North American product emissions certification created specifically for commercial building products. This certification verifies that products meet stringent chemical emission limits originally developed as purchasing specifications for building projects for the US Environmental Protection Agency & the State of Washington.

GREENGUARD Certified products are compliant with stringent emission levels for over 360 VOCs, plus a limit on the total of all chemical emissions combined (TVOC). Furniture products that are **GREENGUARD** Certified are also compliant with the BIFMA X7.1 standard.

GREENGUARD Gold Certification includes safety factors to account for sensitive individuals (such as children & the elderly) & helps ensure that a product is acceptable for use in environments such as schools & healthcare facilities.

In addition to limiting emissions of over 360 VOCs & total chemical emissions, **GREENGUARD Gold** Certified products must also comply with requirements of the State of California's Department of Public Health Standard Method for the Testing & Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers, Version 1.1 (2010) (also known as California Section 01350).
