

THE NEW WEARABLE FOR MORE WATER SAFETY

Kingii is the world's smallest floatation device for everyone who loves water. After his friend tragically drowned, Kingii's founder, Tom Agapiades, set out to develop a recreational water device that could provide additional buoyancy in water when needed.

The result was Kingii, a simple wrist band that could easily be activated when needed. Through this simple device, Agapiades and his team continue advocating and revolutionizing water safety globally.

If you need help staying afloat, pull the lever and an inflation bag propels you to the water's surface. Kingii is strong enough to support an adult of 130 kg/285 lbs. Insert a new CO2 cartridge, and Kingii is fully reusable.

"Think of Kingii as an underwater airbag. The result looks like something out of a James Bond movie."

The New York Times

"The Kingii, a tiny life preserver, could save your summer"

THE HUFFINGTON POST

"It's a simple safety precaution that seemed obvious in retrospect."
