

More than an alarm clock

Clever alarm clocks like the **Brandstand CubieBlue®** are perfect for hotels big and small, offering a range of features designed to improve the guest room experience.

A DIGITAL ALARM CLOCK

Unlike many hotel alarm clocks, all clocks in the Cubie range have dimmable displays, auto-update for daylight saving time and they are easy to program. Simply press the knob, rotate it to choose your alarm time and then press again to set.

TAMPER-PROOF SOCKETS

Tamper resistant plugs come as standard on Cubie devices (even if they are not always a legal requirement). Brandstand is committed to including tamper resistance in all future products for the US, EU, UK and the Middle East.

MULTIPLE POWER OPTIONS

Hotel guests want easy in-room charging, so the CubieBlue® (pictured above) features two power outlets (US/UK/EU models available), a pair of USB Type A charging ports and a USB Type C interface for more modern devices.

MODERN DESIGN

We don't just design the Cubie products to look good. Our products have a proven set of features specifically designed to improve the guest room experience, while also mindful of hoteliers and their needs for durable and affordable tech.

ANTI-THEFT MEASURES

Cubie alarm clock products ship with a handy security c-clamp (plus wood screws) as standard, enabling hotels to fix the units securely to desks or bedside tables. This ensures that your units always stay exactly where you install them.

SINGLE DAY ALARM

We think that all hotel clocks should have 'Single Day' alarm functionality. This means that a 6am alarm set by a hotel guest on Tuesday isn't saved, so it will not sound the next day at the same time (annoying a guest on Wednesday).

FULLY SAFETY TESTED

Brandstand products are safety tested to meet UL standards. US products meet UL 962A for Furniture Power Distribution Units and UL 1449 for Surge Protection Devices Standard. All 230V products meet IEC62368 requirements.

SPILL AND SPLASH PROTECTION

For enhanced durability, the Cubie product line was designed to successfully pass a UL spill test. To do so, devices must maintain their safety after a 1-litre water and salt solution has been poured over the mains power and USB ports.

INTEGRATED WIRELESS SPEAKER

The Brandstand CubieBlue® combines a CubieTime® clock with a stereo Bluetooth® speaker (with passive bass radiator) for audio streaming. Designed for hotel use, the speaker won't remember a previous guest's device details.

BRAND|STAND®

The **Brandstand CubieBlue®** is more than just an alarm clock. Find out why thousands of hotels around the world have already bought one at brandstand.com/collections/alarm-clocks.
