

INSTRUCTIONS

1. Print and check scale with a 50¢ coin.
2. Have child stand on paper, standing as close as possible to the heel's edge on the size chart (Tip: It may be easier to place cut edge of paper against wall and have child stand on paper with heel against wall).
3. Measure to the closest line past the big toe (Don't forget to measure the longer foot as your feet are typically slightly different in size).
4. We suggest adding one full size to allow child room to grow (Don't worry - we have designed our shoes so that they will not fall off even if they are a little bigger).
