

SAFE WORKPLACES

Advanced Hygiene Products

Online Wellness is a pioneer in high quality beauty and wellness products. Since 2004, Online Wellness has built its global supply chain network to source, import and distribute innovative products for the professional service provider.

As part of wellness expertise, our professional hygiene product portfolio features a range of high performance disinfectant solutions designed to simplify implementation of safe work environments, while ensuring minimal business disruption and lower annual costs.

Standard Disinfection Solutions are Disruptive and Expensive

Due to Covid-19 pandemic, governments everywhere require businesses to ensure ZERO infections to avoid quarantine and shutdown. Strict disinfection protocols are mandatory.

Requires frequent applications

Current disinfection solutions require multiple applications through out the day at least every 2 hours to ensure full protection.

Typically involves multiple products

Traditional disinfection protocols require more than one product to offer broad spectrum protection against various viral and bacterial loads

Leaves strong unpleasant odor

Traditional disinfectants based on Phenols, Chlorine and Alcohol leave harsh odors and chemical fumes creating an unpleasant environment for guests and employees.

Disrupts business and productivity

Application of traditional disinfection solutions require that area is vacated before treatment is applied resulting in loss of productive time.

Offers no post-treatment protection

Standard disinfection protocols clean up germs that are already deposited on surfaces. However, new germs deposits remain on the surface resulting in potential exposure and infection risk.

Requires dedicated man power

Regular application during the day requires dedicated man power availability, a challenge during social distancing regime. It also increases business costs.

INTRODUCING

SELF-SANITISING DISINFECTANTS

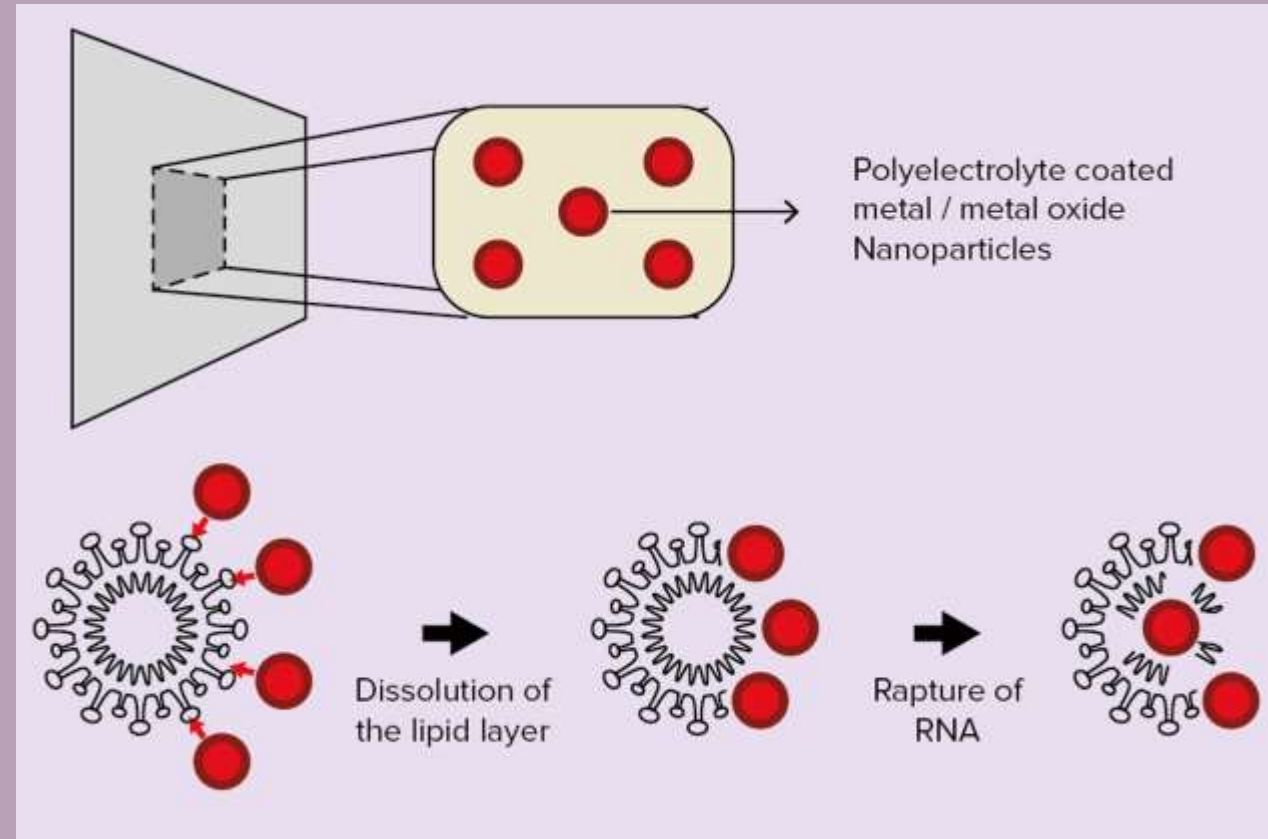

New breed of disinfectants offer superior business benefits and economics.

- **Mitigate COVID-19 business risk**
- **Boost confidence & safety**
- **Enjoy extended protection**
- **Avoid repeat applications**
- **Lower man power costs**
- **Improve consumer experience**
- **Increase employee confidence**
- **Minimise down time**

UNIQUE NANO-TECHNOLOGY

Advanced nano-actives attach to enveloped viruses and germs to stop their transmission

- ✓ Kills microbes on contact
- ✓ Remains active on surface
- ✓ Broad spectrum protection
- ✓ Inactivates SARS-COV2 (COVID-19)
- ✓ Kills virus, bacteria, fungi and mould
- ✓ 99.9% effective.
- ✓ Easy to use. No mixing required
- ✓ Water based. Colourless/Odorless.
- ✓ Low cytotoxicity. High safety.

Nanoparticles bind to microbes breaking down the cell structure. Combined with QUATS molecules, the unique formula inactivates Coronavirus and other enveloped virus effectively on contact.

SAFETY ASSURANCE

99.9% effective

Top trays are control (untreated) and show viral growth. Bottom trays treated with nano-actives remain clear even after 2 hours.
