Measuring Tips:

- Chest: Measure under your arms around the largest part of your chest.
- Waist: Measure around waistline, directly across your navel.
- Hips: Measure around the fullest part of your hips.

Items are measured without stretch. These premium materials will comfortably stretch 15% or more across overall width measurements. Depending on fit preferences you should order based on the desired fit.

For example, if a race fit is desired, the user would note their measurements at select locations and choose to size down from their overall measurements. This will ensure that the garment will be form fitting and minimize excess fabric and drag. Alternatively, if a relaxed fit is desired the user would note their measurements and select the closest size matching those measurements or they may choose to size up for a loose fit.

Vests are often ordered one size larger than jerseys, because the wind blocking material on the front doesn't provide as much stretch as the jersey.
