

WE KNOW ENGINES

Pittsburgh Power has been tearing down and rebuilding engines in our active shop for over 45 years. Using Eco-Pur by OPS with our oil sampling program will extend engine life, give you advance warning of any concerns, and allow you to have our experience and knowledge at your fingertips. If your sample indicates any issues, Pittsburgh Power will troubleshoot and advise on best practices that will leave you feeling confident with your next move.

YOUR OIL CAN'T BE TOO CLEAN

OPS
OIL PURIFICATION SYSTEMS

With the Eco-Pur, oil maintenance becomes less of a chore and easier than ever before. Now instead of changing oil at every service interval, you simply change the Eco-Pur filter, sample the oil, and send it to a lab for analysis. You change oil only when the lab results recommend it. In this way, Eco-Pur users are driving hundreds of thousands of miles between oil changes. They now measure oil change intervals in years instead of months.

COMPLETE OIL MAINTENANCE IN JUST MINUTES

PATENTED TWO-STAGE TECHNOLOGY

Stage 1 - Filtration

At this stage, the Eco-Pur removes solid contaminants down to 3 microns. The systems state-of-the-art filtration media:

- Increases filtration capacity
- Improves filtration efficiency
- Improves filtration life-cycle stability

Stage 2 - Electronically Controlled Evaporation

Here Eco-Pur removes liquid contaminants. The system's patented design:

- Effectively eliminates water and other unwanted liquids from your oil
- Prevents acid build-up
- Reduces corrosion

OPS TECHNOLOGIES PROVEN IN USE

Thousands of owner/operators and fleet managers now get dramatic savings on oil maintenance with OPS Technologies. OPS performance has been backed by lab tests on thousands of vehicles in trucking, public transit, construction, mining, government, and more.

RETURN ON YOUR INVESTMENT IN 6 TO 10 MONTHS

The savings quickly add up once you eliminate routine oil changes with Eco-Pur. You reduce costs associated with oil consumption, oil filters, labor time, and waste oil storage/disposal. Eco-Pur users are now slashing oil maintenance costs. Your Eco-Pur system can pay for itself in 6 to 10 months.

“Change your thinking ... not your oil”

ABOUT ECO-PUR

While most filters on the market can stop particulates within the 10-40 micron range, the Eco-Pur's filter can stop particulates down to 3 microns.

All Eco-Pur units are hand-built in the USA at our Pittsburgh location, with high-quality components. All units have their pressure, flow, and electronics rigorously tested before being sent out.

With the Eco-Pur installed, you now have the potential to change your oil once for every four times you would have normally. These savings can afford you the ability to buy higher quality oils, further building the reliability of your engine.

SAMPLING MADE EASY

With the Eco-Pur's pre-installed oil sampling valve, it has never been easier to get your oil tested. Gone will be the days of awkward siphoning and loosened fittings. While the engine runs, you simply remove the cap and press the button. You will gain peace of mind for two minutes of your time.

KEY BENEFITS

- Lower oil maintenance costs by 80% or more;
- Extend engine and equipment life;
- Reduce Vehicle downtime;
- Increase productivity;
- Reduce negative effects to the environment
