ASSA ABLOY

Experience a safer
and more open world

The XT Traffic Cabinet Lock helps secure our critical infrastructure. All across America, the flow of traffic in our cities is regulated by Intelligent Traffic System (ITS) cabinets that are located on every street corner. ITS cabinets protect the hardware that controls the traffic lights.

The majority of these cabinets are currently locked with outdated and unsecure mechanical locks that have a common and easy-to-duplicate key, making these critical points of traffic control vulnerable to vandalism or attack.

With XT, all access to the cabinet is controlled, scheduled and tracked. Always know who has opened or attempted to pen which cabinets and when. The simple to read data dashboard of the intuitive web-based software shows access trends at a glance, alerting potential problems. The risk of lost keys is reduced, as they can be turned off as soon as the loss is reported. Keys can be set to only work during certain hours, or to expire on a future date.

The XT Traffic Cabinet Lock with a simple retrofit design requiring no hardware changes, door modifications or hard-wiring, is the quickest, most cost-effective way to add the accountability necessary to help eliminate tampering, and to help secure the advanced equipment contained within these cabinets.

Features

- Retrofit into existing hardware-no modifications required
- No wiring required—all power provided by the key
- Indoor/Outdoor use - stainless steel construction
- 2,000 audit events
- Unauthorized key list
- Part of the XT Intelligent Key System
 - Audit Accountability
 - Electronic Scheduling
 - Physical Security
 - Visual Audit

The Medeco XT Intelligent Key System

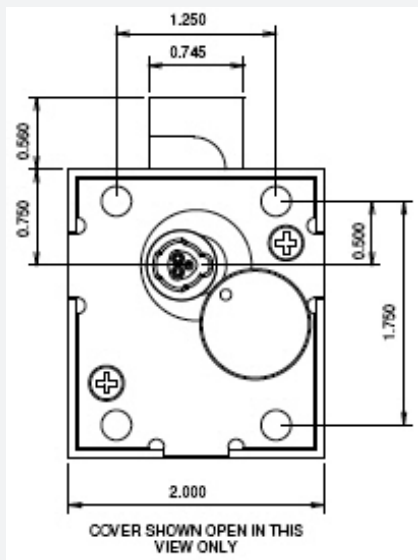

Medeco XT is a complete electronic locking system providing controlled access, accountability, physical security and system management.

The XT System consists of robust locks, electronic "intelligent" keys, and state-of-the-art web-based system software. XT overcomes common key control issues by keeping security high even if someone loses a key. XT adds access control capability in applications such as traffic cabinets, where hard wiring or installing online systems are too costly and complicated.

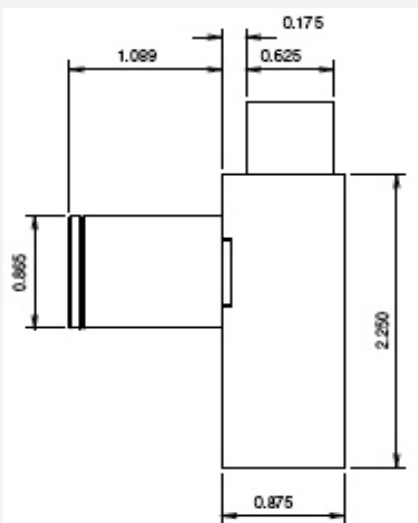

Attack-resistant design and tamper-proof features provide strong protection against forced entry.

The ASSA ABLOY Group is the global leader in access solutions. Every day, we help billions of people experience a more open world.

Front and Side Views

XT Lock/Cylinder Features

- No wiring required - all power is provided by the key
- Indoor/Outdoor use - stainless steel shell construction
- 2,000 audit events
