

Brushing Directions for Clayscapes Pottery Dry Glazes

You definitely want to put it into the dry mix before you add water. If you wanted to make 5 lbs of glaze for brushing, you would add 22.7 grams of the brushing medium to the 5 lbs of glaze. If you were just going to make up 1 lb of the glaze for brushing, you would add 4.54 grams of the medium to the dry mix. 1 lb of dry glaze will make you about a pint of glaze.

On the water content – you will want to add less water if you are brushing rather than dipping. Add 294 grams, (.65 lbs) of water per 1 lb of dry glaze. You will want to use an emersion blender or drill mixer to mix the glaze.
