

**The Sustainable  
Agave Company**  
Your Upcycled, Biodegradable Solution

# We're not single-use. We're sustainable-use.

**Every year we create 20 million tons of plastic waste in the US. Enough to fill a garbage truck every 30 seconds for a year. Even worse, this plastic will take over 200 years to biodegrade.**

Say hello to guilt-free convenience with our new line of sustainable-use items made from biodegradable plastic-alternatives produced from agave waste fibre, a sustainable solution for the environmentally conscious consumer.

## **Sustainable Origins: Working with a Super Powered Plant**

Agave waste is a unique source for biodegradable plastic. The plant is a more sustainable option, even in its origins. During periods of prolonged drought, agave plants require minimal irrigation, efficiently storing seasonal rainfall and moisture from the air in their thick leaves. The benefit? Less CO2 emissions from the initial agricultural process and less disturbance of the natural water pathways in lands that support agave growth.

## **Upcycling: perfecting the circular economy**

Recycling is only part of the solution. The Sustainable Agave Company products connect the circular economy. From the desert soil comes the agave plant, it grants us tequila, and with its remaining fibres we now make sustainable-use items. These products will replace the single use plastics linked to high-use petroleum-based polymers, fossil fuels, and fresh water-intensive practices. Moving beyond primary sourced wooden and paper alternatives that provide a "less than" consumer experience, we have created a durable plastic-alternative that will disappear over just a fraction of your lifetime.

**LEARN MORE**

## **Protecting our desert lifeline: your purchase, our gift**

1% of Purchases you make with The Sustainable Agave Company is committed to restoration efforts in the Colorado Delta, a region of 6M acres with irrigation that provides water to 40M people.

Made with residual agave fiber remaining from tequila production. Our drinking cups are available in a 10oz size. Our goal is to reduce total consumption of plastics while simultaneously contributing to a low carbon circular economy. Agave fiber is a sustainable alternative to plastic. As a company, we take pride in our ability to limit the use of petroleum-based polymers, fossil fuels and water to produce our cups.
