

YOUR MIRROR

We recommend that this item is hung by a person competent in DIY. When fixing onto a brick wall use a two inch steel screw and suitable wall plug. For cavity walls such as plaster board etc. cavity bolts must be used. The mirror is heavy, please ensure the wall surface is of suitable strength and construction to take the load. Keep high enough from reach of children.

Wear suitable eye protection when drilling. Drill the hole and fit wall plug and screw in the wall. Ensure that the screws have a large enough head so they can't be pulled out of the keyhole fitting. Hang the mirror by the keyhole fitting onto the screw.

Wipe clean with a soft dry cloth only. The glass should be cleaned using a damp cloth. Do not use scourers or cleaning agents containing abrasives (such as powder cleaners) as this will damage the surface. Do not subject the mirror to extremes of temperature or place hot or cold items against or in close proximity of glass surfaces.
