Environmental pollutants don't discriminate and daily skin care for men is equally important, as well as professional treatments. ManUp Peel™ has been specifically formulated to resurface, treat, and correct concerns for the male clientele. Our unique concept allows the aesthetician to work with the peel through coarse hair, easing the treatment of acne and Pseudofolliculitis.

## Professional Protocol

### The Gentlemen's Basic Peel Protocol using ManUp Peel™

**Step 1:** Cleanse skin with **Gentlemen's Foaming Wash**. Remove with tepid water.

**Step 2:** Apply **10% Lactic Enzyme Gel Peel** as a degreaser, leave on 2 - 3 minutes (steam is optional) remove with tepid water.

**Step 3:** Proceed with extractions

**Step 4:** Basic Peel Treatment: Using provided Chisel Peel Brush; Apply **ManUp Peel™**, using circular and upward movements against the beard hair growth, working the peel treatment down to the affected skin. Leave on 2-6 minutes (watch for redness and sensitivity.) Remove with tepid water.

**Step 5:** Refresh with **Energizing Treatment Foam**.

**Step 6:** Apply **Purifying Day Lotion**.

## Active Ingredients & Benefits

### Mandelic Acid

Mandelic Acid is an appropriate treatment for a wide variety of skin concerns, from hyperpigmentation to wrinkles. Mandelic Acid also provides excellent results when used in the treatment of acne. It can improve inflammatory pustular, comedonal, and papular acne and has been shown to be effective even in individuals resistant to antibiotics. Mandelic has a larger molecular structure than Glycolic Acid making it less harsh and better tolerated on the skin.

### Salicylic Acid

Unclogs pores by liquefying sebum; derived from Winter Green leaves; anti-bacterial and anti-inflammatory.

**Ingredients:** Mandelic Acid and Salicylic Acid, Ethanol Alcohol.
