

Automatically switches between two sources of AC power (Usually shore and inverter). The switching is biased to shorepower, so if both AC sources are live, the inverter would be switched out of circuit (this prevents accidental flattening of batteries due to inverter being loaded up without the users knowledge). Switching breaks contacts before making with changeover time of typically quarter of a second.

Supplied prewired with internal labelled terminals 3x M25 glands.

Can easily be inserted into existing AC systems where a new inverter has been added.

Part Number	Rating Amps (Kw at 230v)	Dimensions LxWxH (mm)
15-3005	25A (5.7)	190x165x115
15-3007	63A (15)	190x165x115
