

Lansinoh®

Lansinoh® Contact Nipple Shields

Lansinoh® Contact Nipple Shields are effective tools for addressing short term latch-on issues related to premature, small or ill infant, flat or inverted nipples, tongue tie, lip tie, or overactive let-down.

- Ultra-thin, super soft, flexible 100% silicone
- Special cut out design to maximize skin-to-skin contact
- BPA and BPS free
- Includes 2 nipple shields and carrying case for convenience
- Available in 20mm and 24mm sizes

Lansinoh® Contact Nipple Shields

Nipple shields can be used as an effective, short-term tool to support mothers to breastfeed under the care of a lactation consultant or other healthcare professional.

Lansinoh® Contact Nipple Shields were designed to enhance breastfeeding success. The cut out design increases skin-to-skin contact and allows baby more access to smell the breast, stimulating baby's sucking reflex.

Lansinoh® Contact Nipple Shields are made with ultra-thin silicone that is softer and more flexible than other Nipple Shields, designed to increase nipple stimulation and maintain milk supply.

Lansinoh® Contact Nipple Shields are available in two sizes (20mm and 24mm) to ensure appropriate sizing for mom and baby.

Available in multiple configurations.

Contact Nipple Shield
