- 3.) Connecting CodeShooter to Flash Recovery Tool.
 - a. Run the Flasher Recovery Tool application from the desktop shortcut.
 - b. Plugin CodeShooter to PC w/ USB-C cable and wait a moment for CodeShooter to powerup.
 - c. Select the “Connect” button from the Flash Recovery Tool.
 - i. Serial Number, Brand, and Firmware-Version boxes should populate with the values stored on the CodeShooter.

Updating Firmware

When CodeShooter application on iOS or Android is not allowing the CodeShooter to update its firmware, then the Flash Recovery Tool is the best option to update firmware on the CodeShooter device.

To update firmware, click “Update Firmware” and then wait until “serial port opened again.”

Master-Reset

When the CodeShooter device is dropping Bluetooth connection or having other issues related to, then the Master-Reset function is there as an extra aid to eliminate those issues.

To Master-Reset CodeShooter, click “Master-Reset” and then wait until “Reboot done. Flasher can now be used normal.”

Recovery Code

When the CodeShooter device is unfabricated, then there will be a prompt to enter a recovery code upon selecting the “Connect” button.

To Recover CodeShooter, enter in CodeShooter serial number and the email address registered to that serial number and select “Send”.

If unsuccessful, email GiveMePower@EvoPowersports.com to request a recovery code.
