

Pro R Paragon-54 330 Turbo Upgrade System

SKU(s):604FP0087

NOTE: Expect 24–48-hour turnaround from the time we receive your ECU for unlock. Please send your ECU to EVP WI headquarters. Create your Maptuner/CodeShooter account before starting the project. Email us at givememorepower@evopowersports.com

This is a high-performance upgrade! Although we have gone through great lengths to build safety into the upgrade turbo system, the fact is installing any upgrade / turbo system requires care in both operation and installation. Poor fuel, improper setup or any number of things that are done incorrectly can damage your engine!

- You have likely voided the sound and exhaust emission standards of your country if applicable.
- This upgrade is intended for OFFROAD and RACING use only.
- This is a performance upgrade which will VOID your engine warranty especially if installed incorrectly or operated without regard to your instruments.
- The fuel requirements must be adhered to. Poor fuel can destroy an engine in seconds.
- Evolution Powersports bears no responsibility for damage caused to your vehicle by the installation of EVP products. The warranty on big turbo kits is 30 days from the date of purchase. Evolution Powersports, at its discretion will determine whether a part meets the warranty requirements. In no case is there any warranty from EVP for your vehicle or vehicles drivetrain. Although we have been careful to supply you with the highest quality parts possible, we assume no liability for damage to the vehicle or personal injury from installing or using any of our products.
- The installation of this kit is technical and mechanical in nature with many opportunities to make mistakes – mistakes that can be very costly. If you are not qualified to install this kit, bring your vehicle to one of our qualified installation centers to do the installation.
- This kit will make your vehicle faster, climb higher and accelerate more quickly and take a longer distance to brake than a stock tuned vehicle. If you are not capable of controlling the vehicle with the added performance, do not install the kit.
- High boost is hard on spark plugs – they must be changed frequently. If you experience misfire issues – Gap and replace the spark plugs.
- A full exhaust and clutching are required for this kit and can be purchased separately.
- Do not ever allow a child or an unqualified driver to operate this vehicle.

Parts Included in Paragon 54-330 Turbo Upgrade System

604FP0075	Pro R Paragon 54/68 Black Turbocharger Assembly
604FP0076	Pro R Paragon Installation Kit
100FP0187	Pro R P54-330 Triple Fan Intercooler Assembly
953RU0485	Pro R Triple Fan Intercooler Hardware Kit
100RP0154	Pro R Charge Tube Kit, Black
953RU0421	Pro R Turbocharger Charge Tube Hardware Kit
203FP0110	Pro R Turbocharger Air Intake Kit
804FP0259	Pro R OEM Coolant Tank Relocation Kit
803FU0011	Pro R Catch Can Kit
100FP0187	Pro R Blow Off Valve 2.0 (BOV) Kit
300FP0374	Pro R Turbocharger Header/Exhaust System
004FP0361	Pro R Turbo Bench Power Flash, CAN Unlock
502FU0018	1300cc Injector, ID1300-XDS Uskar, 34mm Length, 14mm top, 14mm lower, set of 4
603FP0004	Pro R External Wastegate, WG40 Gev V Compgate 40, 14psi
705RU0029	3 Bar MAP Sensor
702RC0014	Universal Intercooler Fan Wire Harness
702RC0023	Defender Intercooler-Fuel Pump Harness
702RP0016	RZR Air to Air Triple Fan Intercooler Harness
925FP0184	Pro R Exhaust Facia Trim Plate
102FP0007	Pro R Intercooler Mount

Level	Tunes	Max Boost (psi)	Spark Plug Gap	Spring	Operating RPM	Engine HP
P54-330	91	6-7 psi	.016 - .018	Pink (7)	8200-8450	330CHP, 270WHP

Required Parts (Sold Separately)

<ul style="list-style-type: none"> • EVP calibrated Tapp primary clutch or EVP Shift-Tek Weights • EVP calibrated STM secondary clutch or EVP Shift-Tek Spring • AFR Module • Oil Change Kit (Recommended) • Engine Coolant • Compressed air and parts cleaner • P90X primary clutch puller
--

Pro R Disassembly

Step 1: Remove the (4) bed screws using a T-40. Remove the bed.

Step 2: Remove the passenger and driver seat, if a 4-seater remove the rear seats.

Step 3: Remove both firewall panels, (6) 1/4-turn fasteners.

Step 4: Cut all zip-ties holding the taillight harness and rear-view camera. DO NOT remove the clips from the panels, this way you can reuse all OEM clips and supplied zip-ties in the hardware kit.

Figure 1

Step 5: Unplug both rear taillights and camera.

Step 6: Remove the lower rear valance around the muffler tips. Use a T-50 socket.

Figure 2

Step 7: Remove the upper rear valance with taillights. (4) T-40 screws and (6) push darts. (2) push darts are tucked underneath the rear fenders.

Step 8: Remove the cold air intake tube (bed to airbox tube) and intake tube (airbox to throttle body). Remove the crankcase breather tube from the intake tube. (4) worm drive clamps total.

Figure 3

Figure 4

Step 9: Remove the coolant tank cap and drain the tank. Remove the (2) 10mm screws holding the airbox in place. Two tabs will be located underneath the airbox.

Step 10: Remove (2) T-40 screws holding the coolant reservoir in place. Remove all hoses from the coolant reservoir.

Figure 5

Figure 6

Step 11: Remove the bed frame hardware (4) 13mm bolts and (1) T-40 for the CVT boot support bracket.

Figure 7

Step 12: Remove (2) 14mm bolts holding the muffler and header pipe together. Remove the muffler by sliding it out of (3) rubber gromets (towards the left side of the vehicle). Gromets shown below.

Figure 8

Step 13: Remove the airbox and bed frame. Cut all zip-ties holding the engine harness to the bed frame.

Step 14: Remove the header heat shield. (4) 10mm screws.

Figure 9

Step 15: Remove (9) 6mm Allen screws holding the header to the engine block. Unplug the O2 sensor from the engine harness. Remove the header.

Figure 10

Step 16: Remove the alternator belt cover. (7) 10mm screws.

Figure 11

Step 17: Remove the CVT box breather. (1) worm drive clamp.

Figure 12

Step 18: Remove the chain tensioner access panel from the timing chain cover, using an 8mm socket.

Figure 13

Pro R Reassembly

Step 1: Install supplied EVP chain tensioner cover. Torque the OEM hardware to **80 in-lbs.** Reinstall the alternator belt cover.

Figure 14

Pro R Intercooler

Step 1: Remove (6) T-40 screws on the back cargo area. See photo below.

Figure 15

Step 2: Install the intercooler cage onto the vehicle. Hand tighten a few T40 screws to hold it secure. With a silver sharpie, outline both circles onto the plastic. Remove the cage. With a 3.50" whole saw or Dremel with a carbide bit, cut out both holes. Use fine grit sandpaper and a heat gun to clean up the burs.

Figure 16

Figure 17

Step 3: Install the intercooler onto the mount. Use supplied M8-16mm flanged screws with spring washers. A total of (6). Make sure the fan harnesses go inside the mount. (photo taken on work bench).

Figure 18

Figure 19

Step 4: Install the intercooler and cage onto the vehicle. Use OEM hardware to secure the intercooler cage to the vehicle. Use (2) M8x35mm button head, (2) oversized washers and nyloc nuts to secure the rear of the intercooler cage.

Figure 20

Figure 21

M8x35mm
with
oversized
washers'
underneath

Figure 22

Pro R Header

Step 1: Make sure all debris is off exhaust ports on the cylinder head, install supplied header gasket, header pipe, (9) M8x30mm screws with (9) conical washers. Torque to the sequence below.

Figure 23

Figure 24

NOTICE

Exhaust manifold hidden for image clarity

TORQUE

Exhaust Manifold Fasteners:
Step 1: 60 in-lbs (7 Nm) Step 2: 22 ft-lbs (30 Nm)

Figure 25

Step 2: Install the 41mm OD stainless steel sleeve into the intake cylinder on the wastegate. Install onto the header with a 204221 clamp. Apply anti seize on threads of the clamp. Keep clamp loose for now.

Figure 26

Figure 27

Step 3: Install turbocharger to the header using a 215221 clamp. Apply anti seize on threads of the clamp. Keep clamp loose for now.

Figure 28

Figure 29

Step 4: Install the mid-pipe to the turbocharger and wastegate dump. Apply anti seize on the threads. Leave clamps loose for now. Wastegate dump to mid-pipe will use clamp 105212. The turbocharger to mid-pipe will use clamp XXXXX.

Figure 30

Step 5: Leave the mid-pipe hanging for now, you will connect the muffler later when the bed frame gets reinstalled.

Step 6: Install the 21" hose line from the bottom port on the wastegate to the turbocharger fitting.

Figure 31

Figure 32

Turbocharger Oil Lines

Step 1: Locate the oil filter, remove the 5mm plug out of the oil filter housing.

Figure 33

Step 2: Locate the 60" oil feed line. Install supplied fire sleeve onto the oil feed line. Install supplied banjo bolt and washers on the straight fitting. Install it onto the oil filter housing. DO NOT OVER-TIGHTEN.

Figure 34

Figure 35

Step 3: Route the 90-degree fitting to the oil feed on the turbocharger.

Figure 36

Step 4: See oil feed line routing below, use supplied 5/16" & 1/2" P-clamps to hold the oil line around the timing chain cover.

Figure 37

Figure 38

Step 5: Locate the oil drain hose with (2) 90-Degree fittings. Install fire sleeve onto the oil drain hose. Install one end to the oil drain plate located where the timing chain access panel is.

Figure 39

Step 6: Install the other 90-degree fitting to the oil drain located on the turbocharger.

Figure 40

Pro R Charge Tube

Step 1: Locate the airbox to turbocharger charge tube. Install the 1/2" plug into the crankcase vent port. Fasten with a 24.1mm pinch clamp. (Figure 41). Turbocharger to intercooler charge tube will need a BOV plug installed with a 34.6mm pinch clamp. (Figure 42)

Figure 41

Figure 42

Step 2: Install the O-rings into the billet charge tube connectors. Apply dielectric grease to the O-rings. The O-rings are directional, install as shown below.

Figure 43

Figure 44

Step 3: Locate the intercooler to throttle body charge tube. The blow off valve will be mounted in the port shown below.

Figure 45

Step 4: Install the turbocharger to intercooler charge tube. Once you have fit the silicone through the plastic, install the billet connector. Use dielectric grease if needed. Fasten down with a 60-80mm worm drive clamp. Fastened the turbocharger side with a 50-70mm worm drive.

Figure 46

Step 5: Install the throttle body to intercooler charge tube. Once you have fit the silicone through the plastic, install the billet connector. Use dielectric grease if needed. Fastened down with a 60-80mm worm drive. Fastened down the throttle body side with a 70-90mm worm drive.

Figure 47

Figure 48

Step 6: Install the billet connectors to the intercooler. Use (3) cotter pins per each side.

Figure 49

Figure 50

Injector/MAP Sensor Installation

Step 1: NOTE: clean intake plenum with compressed air, especially around the injector ports. Remove (4) injector connectors, cut the zip-ties holding the injector harness to the intake plenum and remove from the fuel rail. Remove the blue clip and fuel hose connector from the fuel rail.

Figure 51

Step 2: Remove the (4) 8mm screws holding the fuel rail to the plenum. Remove the fuel rail.

Figure 52

Step 3: Remove the injector clips, remove the injectors. Blow out the fuel rail with all injectors removed.

Injector "C" clip.

Figure 53

Step 4: Install the supplied (4) injectors. Apply dielectric grease to the O-ring on the injector. Reinstall the injector clip. Make sure the injector is properly seated. Torque fuel rail to 7 ft-lbs.

Step 5: Remove the MAP sensor plug. Do NOT use a screwdriver. Remove OEM MAP sensor using a 8mm socket. Install the supplied MAP sensor, apply dielectric grease on the O-ring before installing.

Figure 54

Step 6: Remove the brass barb fitting on the bottom side of the intake plenum. Install the supplied M12 x 1/4" barb fitting.

Figure 55

Step 7: Reinstall the fuel line to the fuel rail (blue clip). Reinstall the OEM harness and injector connectors.

Step 8: Install new zip-ties onto the plenum to hold the factory harness.

Figure 56

Step 9: Re-gap the OEM (NGK-ZMR7A-10) spark plugs to 0.018". Install the spark plugs back into the cylinder head. **Torque to 9 ft-lbs.**

Step 10: Reinstall ignition coils and **torque to 80 in-lbs.** Reconnect all (4) ignition coils to the harness.

Pro R Airbox (Pre 10-24-2023)

Step 1: Locate the air filter adaptor template. Install it onto the outside of the airbox. Once aligned properly mark the (4) holes with a silver sharpie.

Figure 57

Step 2: Use a 1/4" drill bit and drill out (4) holes. Fasten the bracket down with supplied (4) M6x16mm flanged head screws into the Nutzerts.

Figure 58/59

Step 3: Reinstall the airbox (loosely) into the vehicle.

Step 4: Reinstall the bed frame with OEM hardware.

Step 5: Reinstall airbox hardware and engine harness clips. Use supplied zip-ties.

Step 6: Install supplied air filter and pre filter into the airbox.

Pro R Airbox (Post 10-24-2023)

Step 1: Locate firewall and bed frame brackets along with (4) M6x16mm flange bolts, (2) Nylock nuts and (2) M6 Nutzert.

Figure 57B

Step 2: Locate the firewall side of the bed frame, you will find (4) holes total (2) per frame rail. Install a M6x1.0 Nutzert into the bottom hole. On the bottom of bed frame.

Figure 58B

Step 3: Install (2) M6x16mm flanged screws holding the bed frame air box relocation bracket to the bottom of the bed frame. See photo.

Figure 59B

Step 4: Install the bed frame loosely, flip the airbox 180 degrees (making sure the airbox still opens inside the cab). Install the firewall air box relocation bracket using OEM hardware.

Figure 60B

Step 5: Install (2) M6x16mm screws and (2) M6 Nylock nuts holding the bottom of the airbox to the bed frame air box relocation bracket.

Figure 61B

Step 6: Reinstall the bed frame with OEM hardware.

Step 7: Reinstall airbox hardware and engine harness clips. Use supplied zip-ties.

Step 8: Install supplied air filter and pre filter into the airbox.

Pro R Catch Can

Step 1: Install the catch can on the left-rear frame. Tighten down the clamp around the tube frame. The port on the cap will face the engine bay. Install the 1/4" rubber hose to the barb located on the bottom of the catch can. Run it down into the belly pan.

Figure 60

Figure 61

Step 2: Locate the engine breather hose going to the plenum (which is currently removed). Remove the hose from the engine. Remove the longer piece of hose. Keep the small piece with the connector and one-way-ball valve. Reconnect the small piece to the engine.

Figure 62

Figure 63

Step 3: Install the catch can hose. The “Y” portion of the hose will go to the small connector on the engine and the valve cover.

Figure 64

Figure 65

Figure 66

Pro R Blow Off Valve (BOV)

Step 1: Install the pre-filter onto the BOV and use supplied zip-tie around the base of the BOV to hold the prefilter on.

Step 2: Install the BOV into the charge tube between the intercooler and throttle body. Use supplied 25-40mm worm drive to fasten down.

Figure 67

Step 3: Install the vacuum line to the BOV and plenum barb, that was installed earlier. Use pinch clamps to secure.

Figure 64

Step 4: Install the V-flow from the turbocharger to airbox. Use supplied 70-90mm and 90-110 worm drive clamps.

Figure 68

Pro R Coolant Tank/ECU Removal

Step 1: Located behind the passenger seat (if a 4 seater the rear passenger seat), remove the (4) push darts holding the sound dampener in.

Step 2: Located behind is the ECU. Remove the black clip. Remove the (4) T15 screws holding the ECU in place. Unclip the ECU connectors, left before the right.

Figure 69

Figure 70

Step 3: Remove the bed to CVT ducting, (2) worm drive clamps.

Step 4: Freely hold up the coolant reservoir bracket, keeping the EVP logo in line with the push dart hole and using the OEM existing hole for the bottom right Nutsert. (Figure 71-72).

Step 5: Angle the bracket so you cannot see the 90-degree bend on the plastic. Figure 73 wrong, Figure 74 correct.

Step 6: Mark the (3) holes out with a sharpie. Cut the holes out with a 1/4" drill bit. Install the mounting hardware on the bracket side.

Figure 71

Figure 72

Figure 73

Figure 74

Step 7: Mount the coolant tank. Make sure to mount the coolant tank inside the lower cutout.

Step 8: Cut the pinch clamp holding the valve cover water fitting on, remove the OEM hose from the valve cover fitting. Install the supplied 18" of 5/16" hose to the valve cover fitting. Use 15.7mm pinch clamp to secure.

Figure 73

Step 9: Install the OEM valve cover hose to the TOP barb on the coolant tank. Install the 8" piece of 5/16" hose on the BOTTOM barb for the radiator overflow. Install a 5/16 adapter to the end of the 8" piece of hose. Use 15.7mm pinch clamps.

Figure 74

Step 10: On the valve cover water hose, the part that was connected to the fitting, cut 1.0" or the 45-degree bend off.

Figure 75

Step 11: Insert a 5/16" adaptor into the valve cover hose and connect it to the 18" of hose coming from the valve cover. Use 15.7mm pinch clamps.

Figure 76

Figure 77

Step 12: Install the supplied hose from the large barb on the coolant tank to the thermostat block. Reuse (2) self-tightening OEM clamps.

Figure 78

Figure 79

Pro R Triple Fan Intercooler Harness

Step 1: Intercooler wire harness below.

Figure 80

Step 2: Locate the fuse block underneath the center tunnel. Below the glove box. Mount the relay to a push dart. Run the ground wire to the frame or battery. Connect the positive terminal to the battery.

Figure 81

Step 3: Run the fan harness pigtail behind the passenger seat, zip tie it to the frame rail. Plug in the triple fan harness and route it up to the intercooler. Plug in the fans.

Figure 82

Figure 43

Step 4: Below is the fuel pump “Y Harness”. Plug one end into the OEM harness and the other end to the fuel pump. Plug the single connector to the intercooler relay harness.

Figure 44

Step 5: Below are photos of the harness installed. You will need to remove your seat frame to access the fuel pump assembly. Zip tie excess wires underneath the tunnel.

Pro R Turbocharger Exhaust

Step 1: Remove the lower exhaust isolator from the frame. Use a 13mm socket.

Figure 84

Step 2: Install the exhaust clamp onto the muffler pipe. Install the muffler to the vehicle, re-use both top isolators. Install the bottom isolator onto the muffler and frame. Reinstall hardware.

Figure 85

Step 3: Remove the O2 sensor out of the OEM header using a 7/8" or 19mm wrench. Use anti seize on the threads and install onto the new down pipe. Reconnect the electrical connector to the harness.

Figure 86

Step 4: Tighten all clamps on the turbocharger, wastegate, mid-pipe, muffler, and muffler tips. Use anti seize on all threads. DO NOT overtighten the V-band clamps.

Polaris Pro R Rear Facia

Step 1: Open the new Pro R rear Facia box. Place the raw aluminum backer plate onto the rear facia trim. Use the M4 hardware and install. Keep the head of the screws on the outside.

Figure 87

Step 2: With a T50 socket remove the (2) screws holding the rear fascia to the frame. Keep the plastic step washers.

Figure 88

Step 3: Place the EVP fascia trim piece onto the vehicle. Reuse the OEM plastic step washer and bolt. Start securing but leave somewhat loose.

Figure 89

Step 4: Install the remaining hardware through the OEM plastic tabs. Place a washer on the head and nut side. Fasten down. Also finish fastening the T50 screws.

Figure 90

Pro R Turbocharger Clutching

Step 1: Remove the (5) CVT cover bolts using a 10mm socket. Loosen the 1/4 twist latches around the CVT cover. Remove the cover.

Step 2: Remove the belt.

Step 3: Remove the primary bolt using a breaker bar and T60 socket.

Step 4: Use a P90X primary clutch puller to remove the primary clutch from the crankshaft.

Step 5: Remove the secondary bolt using a 13mm socket.

Step 6: Using a clutch compression tool, loosen (3) helix bolts using a 13mm socket.

Step 7: Remove the OEM secondary spring and install supplied orange/blue spring. Put the secondary clutch back together.

Step 8: Reinstall the secondary clutch and torque the bolt to **55 ft-lbs.**

Step 9: Install the TAPP primary clutch. Install supplied spacer on the OEM bolt and torque to **90 ft-lbs.**

Step 10: Reinstall the CVT belt in the correct orientation.

Step 11: Spin the secondary a total of 5 rotations to set belt deflection.

Step 12: Reinstall the CVT cover and hardware.

Figure 91

Finishing Up

Step 1: Change engine oil and oil filter.

Step 2: Add coolant to the reservoir.

Step 3: Drain the fuel tank and add correct fuel for your tune.

Step 4: Reinstall your ECU.

Step 5: Start the vehicle and let it idle for a few minutes, keep an eye on the coolant level. Add if necessary. Look for any leaking. Once the coolant level is correct, shut the vehicle off.

Step 6: Reinstall all body panels, bed, skid plate, interior, etc.

Thank you for choosing Evolution Powersports products. If you require further assistance, please call our Tech Support @ (715) 247-3862

Note: *This product is exempt from the emission standards and related requirements of 40 C.F.R. § 1051 as provided by 40 C.F.R. § 1051.620, and California law [e.g., vehicle code §§ 27156 and 38391].
