

X3 Head Stud Kit 9mm

SKU(s): 800FC0000

INCLUDED PARTS

(1) X3 Head Stud Kit 9mm
-(8) 9mm Head Studs
-(8) 9mm Washers
-(8) 9mm Nuts
-Assembly Lube

REQUIRED TOOLS

Torque Wrench

INSTALLATION STEPS:

Remove (1) factory head bolt and replace with (1) ARP 625 Head Stud 9mm. Apply supplied assembly lube to the top of the stud threads and both sides of the washer and nut. Install washer first, then thread nut onto the top of the stud - torque nut to **45 ft lbs**. Be very careful not to drop anything into the engine! **NOTE:** Do this process one at a time for all remaining head bolts. **Never loosen more than (1) head bolt without replacing and torquing with a stud.** This will ensure the cylinder head gasket does not lose its seal. Once all factory bolts have been replaced with studs, torque the head according to the "REPLACEMENT" pattern and torque steps below. When all studs have been torqued to the final value, re-torque to the final value (3) more times.

NEW GASKET INSTALLATION:

NOTE: If the engine is disassembled and a new head gasket is being installed, see the "**NEW GASKET**" torque pattern and torque below.

Please refer to the shop manual for removal and installation and timing the camshafts.

- To ensure proper thread engagement and accurate torque, be sure all components are clean and free of debris.
- Use the supplied assembly lubricant on the top side of the stud and between the washer and nut.
- Hand tightens the stud until it lightly seats into the block.
- Install the washer and nut then torque as listed below.

REPLACEMENT Torque Procedure

1. Initial 45 ft lb
2. Final 52 ft lb confirm
3 TIMES

NEW GASKET Torque procedure

1. Initial 28 ft lb
2. Intermediate 45 ft lb
3. Final 52 ft lb confirm 3-TIMES
