

iO:M8 ROSE –

Live Microscope for Rapid On-Site Evaluation

The iO:M8 ROSE is currently under development and will be launched soon! The device is a fast and simple aid for healthcare professionals for rapid microscopic assessments close to the surgical arena or in decentralized sites, for example during intraoperative procedures for remote support.

(*example visual - appearance subject to change)

What is unique? With the PreciPoint solution, you will be able to smoothly work digitally with very complex specimens and continuously refocus as well as zoom.

- » Live microscopy: fast and instant, no waiting time for image files/ no WSI generation.
- » Continuous zoom: start from the slide overview to find ROIs, and seamlessly zoom in.
- » Crisp images: the focus is completely in your control, refocus live - this is real digital microscopy.
- » Fully controllable via PC: the prerequisite for working remotely.
- » Robo microscopy: fully motorized x-y-stage and z-axis.
- » Easy loading: up to 4 standard slides can be viewed in one go.
- » Fast setup: no integration into LIMS or IT infrastructure necessary.
