PICO-LASER HOME REMOVAL PEN

SAFE USAGE GUIDE

Read the following guide CAREFULLY to ensure proper safe functioning of the device.

Following guidelines will ensure optimal functionality and results whilst minimising risk.

Product features high beam laser.

KEEP OUT OF REACH OF CHILDREN.

PERSONAL HOME USE LASER TATTOO REMOVAL DEVICE
WHAT IS PICO?

Pico-Second Lasers are FDA approved and clinically validated therapy devices for laser tattoo removal. The laser beam of the pen has very strong power which can blast the melanin into tiny particles in a very short time, the melanin will be absorbed by lymphatic metabolism and gradually decreases over time.

BENEFITS OF PICO

Much more effective than Nano-Laser, when following guide lines, the laser emitted by the picosecond laser pen has selective photothermolysis, which means the laser will only damage the melanin while not damaging other tissues around.

Applications of the Picosecond laser can extend beyond tattoos to pigmentation reduction and tissue remodeling.

Compared to Nano-Laser the energy from Pico-Laser is efficiently converted into the mechanical stress needed to fracture particles into smaller fragments, which are easier for the body to remove, resulting less risk for side effects.
HOW TO USE

SAFE USE GUIDELINES

After powering on the device the digital screen displays **frequency** and **intensity**.

Press the "Inten" and "Fre/Hz" button to select the lowest intensity (9) and frequency.

During operation, the subject must wear protective glasses.

Put the hole of the pen towards to the spot where you want to operate with.

Requires multiple routine sessions.

CONTINUOUS LOW INTENSITY USE OVER 3 MONTHS FOR BEST RESULTS

NO MORE THAN 1-2 SECONDS EXPOSURE AT A TIME IN ANY ONE PLACE.

START FROM LOWEST LEVEL 9, THEN SLOWLY ADJUST PICOSECOND LASER PEN TO THE SUITABLE LEVEL DEPENDING ON EXPERIENCE.
**DON’T**

FAILING TO FOLLOW GUIDELINES CAN RESULT IN DAMAGE TO SKIN OR INADEQUATE RESULTS.

Do not use the pen more than 2 times in one month.

Do not shine the pico-laser in or around the eye area.

Do not submerge the treated area in water for 7 days after operation.

Do not apply make up to affected area.

Keep out of reach from children.

Do NOT shine the pico-laser in eyes, doing so will result in harm.

Requires Multiple Routine Sessions with minimum 1 week break.

Do not use the machine at high intensity without long break.

Do not start the machine at high intensity.
