Who we are

Swimtraxx is the only full-stack sports technology brand based in Leuven, Belgium – and is the only brand worldwide specifically aiming to help the ambitious swimmer perform even better through wearable technology. Currently, we are open to providing a learning experience for data science/engineering students through internships.

What we are looking for

You as an intern should be a master student in computer science with knowledge and experience in machine learning. Ideally, you have followed a course on machine learning before starting this internship. More specifically, we expect the following:

- You are familiar with basic concepts of machine learning.
- You have experience with data science tools in Python.
- You have experience with programming in C or a similar language.
- You are interested in sports and human movement analysis.

How you can surprise us

- Experience in sports, the medical technology sector and/or similar

Why you should contact us

- You match the above description
- You understand working in a startup requires a willingness to broaden your horizon
- You want to be in contact with (elite) athletes on a regular basis to perform testing
- You are eager to work on the processing of athlete data
- Words like "startup", "dynamism", "growth" and "challenge" excite you
- You would love to have an important impact in the sports technology sector
- You value open team communication

Contact
