

Who we are

Swimtraxx is the only full-stack sports technology brand based in Leuven, Belgium – and is the only brand worldwide specifically aiming to help the ambitious swimmer perform even better through wearable technology. Currently, we are open to providing a learning experience for data science/engineering students through internships.

What we are looking for

You as an intern should be a bachelor or master student in computer science with an interest in developing frontend tools. More specifically, we expect the following:

- You have experience with Python data processing.
- You have experience with relational databases.
- You are familiar with frontend development tools such as React.
- You are interested in applications for sports and exercise physiology.

How you can surprise us

- Experience in sports, the medical technology sector and/or similar

Why you should contact us

- You match the above description
- You understand working in a startup requires a willingness to broaden your horizon
- You want to be in contact with (elite) athletes on a regular basis to perform testing
- You are eager to work on the processing of athlete data
- Words like “startup”, “dynamism”, “growth” and “challenge” excite you
- You would love to have an important impact in the sports technology sector
- You value open team communication

Contact

Interested? Please send a CV tailored to the above to create.impact@swimtraxx.com
