

RECOMMENDED PLACEMENT

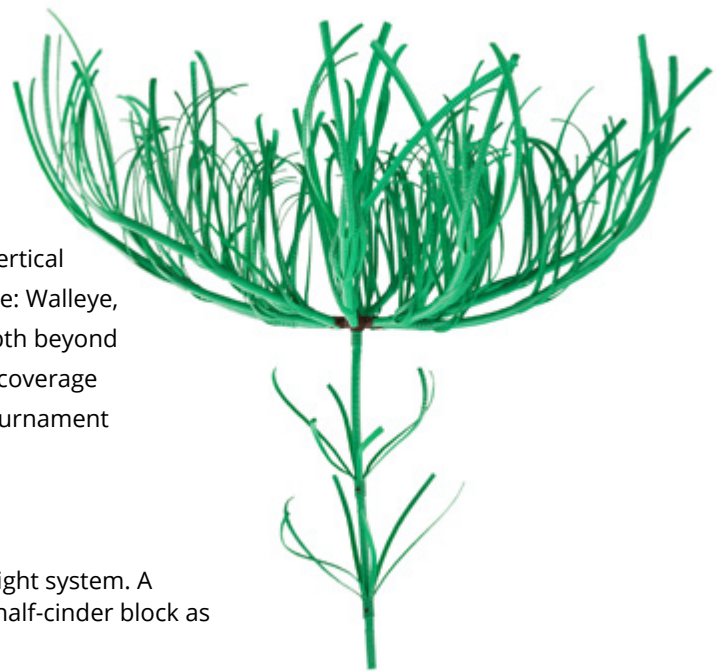

The Honey Hole® Canopy provides massive, easy to deploy, suspended vertical habitat for species that utilize more of an open water hunting strategy like: Walleye, Crappie, and Hybrid Striped Bass. Canopies can be suspended at any depth beyond ten feet and can be stacked vertically to provide complete water column coverage within a 12 foot diameter. Canopies are quickly becoming a favorite of tournament pros and vertical-jig anglers.

Assembly Instructions

Honey Hole® Canopies do not require assembly, only a quick link to a weight system. A minimum of 15 lbs is required to sink to the habitat. We suggest using a half-cinder block as a weight.

- To link the Honey Hole® Canopy to a weight, simply slip the 1/8" cable and snap link through an attachment point on the weight and snap the quick link onto the cable.
- To deploy, lengthen or shorten the cable to your preferred suspension depth and toss the whole structure into the water. Honey Hole® Canopies are designed to spread out while they sink.
- For maximum coverage, be sure to spread the leaves apart by folding them backward against each limb prior to deployment.

It is recommended that you wear safety glasses when shaping and installing the Honey Hole Live Series products.

Package Contents

(1) Fully Assembled Canopy

Single center stem, aluminum housing with (4) center floats and (10) limbs, each with an inner float. Cable and shackles for attachment to weight.

(1) 10'x1/8" Stainless Cable

(2) Galvanized Shackles
