

Honey Hole®

ARTIFICIAL HABITAT

Imitating Nature's Design

Honey Hole Dock Dropper

RECOMMENDED PLACEMENT

The Honey Hole® Dock Dropper turns your dock into a mega fish structure that attracts fish right where you want them!

Increase fish congregation by placing multiple units on your dock to create a massive, floating structure that will bring fish in for you to catch. Couple the Honey Hole® Dock Dropper with a Pond King dock mounted fish feeder to draw fish in and hold them year-round at your own private fishing spot!

Assembly Instructions

The Honey Hole® Dock Dropper should be attached to the side of your dock in a spot where the water is at least 15 feet deep.

Simply shackle the cable around an attachment point, like a vertical post or dock cleat, and drop the rest into the water. The chain at the end provides the weight to sink the habitat vertically, directly beneath your attachment point.
