

TECHNICAL DATA SHEET

Specie:	American White Oak Veneer
Dimensions:	Thickness: 0.6 – 2 mm Width: 100 mm and up Length: 2100 – 3500 mm
Specific Gravity:	600 – 800 kg/m ³
Cutting Methods:	Quartered or plain slicing
Uses:	Used in all wood sectors due to its resistance to external agents. Used for the production of furniture, doors, panels, wood floors and stairs. In the United States, it is widely used for whiskey barrels.
Characteristics:	Given that there are more than 80 species of Oak in the US alone, the color of the heartwood can vary from light to very dark brown. The sapwood, which is not always clearly differentiated from the heartwood, is slightly colored.
Drying:	Drying times are very long since it must be dried using moderate heat and slowly to prevent the wood from splitting.
Surface:	All treatments can be done without difficulty. Often used for rustic tints.
Gluing:	It glues well but nail joints require pre-drilling.
Country of Origin:	United States of America – North America
Botanic Name:	Quercus Alba
