C. Installation instructions

Note: Stop the vehicle with the steering wheel running straight, disconnect the battery terminals, and wait about 15 minutes before starting work. Please contact the car manufacturer in advance for information on how to reset the battery by disconnecting the battery terminals.

1. Push the spring through the holes on the left and right sides of the genuine steering wheel (diagram ȳ) to unlock the airbag module, and then spiral. Remove the coupler from the cable and remove the airbag module.

2. Remove the coupler connected to the spiral cable, remove the center bolt, and remove the genuine steering wheel. Tapping screw (black) at 6 o'clock direction on the back side of the bezel (diagram ȳ) and tapping screws on the front side at 3 o'clock and 9 o'clock directions - (silver) and remove the bezel.

3. Remove each wiring, steering switch, and paddle shift lever from the genuine steering wheel. To do.

Note: At this time, the paddle shift couplers are the same for both left and right sides, so you will know the combination later.

Please mark accordingly.

*4 genuine tapping screws (silver) and lane departure vibrate

The generation generator unit is not used.

4. Place the genuine switch on the switch mount and insert the genuine tapping screw from the back side.

(black). The right side will be removed later, so temporarily tighten the tapping screw.

Please keep it.

*Be careful not to overtighten as the other party is made of resin.

5. Place the paddle shift lever on the paddle shift mount and install the genuine tapping screw. (black).

*Be careful not to overtighten as the other party is made of resin.

6. Attach the switch mount to the boss using the included low head bolt M6x12.

(Figure

ÿ) Tightening torque 2.0 to 2.5 N•m (0.2 to 0.25 kgf•m)

*Be careful not to overtighten! If you tighten it too much, the resin will be crushed and damaged.

The three M6x10 low head bolts assembled into the boss body are tightened to the specified torque.

When removed, tighten to the specified tightening torque.

Tightening torque 5.2 to 7.2N•m (0.5 to 0.7kgf•m)

7. Remove the temporarily fixed right steering switch and connect the genuine wiring coupler.

Use the oval hole on the side of the boss to pass it from the inside of the boss to the outside and connect it to the steering switch.

Continue.

After connecting the coupler, turn the steering switch using the genuine tapping screw (black).

Attach the book to the touch mount.

*Be careful not to overtighten as the other party is made of resin.

8, Put on the boss cover.

9, Boss the couplers on the left and right side of the paddle shift

Using the round hole on the side, insert the boss from the outside to the inside.

Pass it through to the side and connect with the genuine coupler.

10, Place the paddle shift mount over the boss. Arrange the wires so that they do not get caught.

Please.

11, Attach the ground of the genuine wiring to the bottom of the boss using the included + pan head M3x8 screw
erase. (Figure ỹ)

12. Wrap insulating tape around the horn + flat terminal.

13, Connect the included airbag canceller to the spiral cable. Install it with the wire coming
out on the left side as shown in the diagram on the left.

14, Use the original wiring as a spiral cable

Connect the boss and align the top position with the shaft

Insert them together. Wiring is inside the boss

Please put it in your section.

15, Attach the steering wheel to the boss using the supplied bolt (or the bolt that comes with the steering wheel) and tighten the center nut to the specified torque of 62N•m (6.2kgf•m). Note: Degrease the shaft taper part and serration part with parts cleaner, etc.

please.

*When installing a MOMO type horn button, fit the included horn ring into the inner diameter of the boss before installing the steering wheel.

Do not use a horn ring when installing a NARDI type horn button.

yeah.

16, Connect the genuine horn wiring and horn button and attach it to the steering wheel.

17, Connect the battery terminals.

If you need to reset the settings, please follow the instructions specified by the manufacturer.

*An error will appear when you press the lane departure button, but it will disappear automatically when you restart the engine.

In rare cases, an auto cruise failure and error may occur when the engine is started, but it will automatically recover immediately and the auto cruise function will continue.

We have confirmed that it works.

D. Precautions

- After installation is complete, operate the steering wheel and check for any abnormalities. Correct wiring was not done, and the vehicle side

Steering operation may become difficult if the spiral cable is pushed by wiring. Also, drive in that condition.

If you continue, vehicle parts may be damaged. be careful.

•Before operating the vehicle, be sure to confirm that each installed part is secured. If looseness occurs during operation, steering will occur.

This is extremely dangerous as you will not be able to operate the ring.

- Please do not modify or use this product. • Please carefully

store the removed genuine steering wheel and parts. When returning to the original state for some reason

You will need. Our company cannot be held responsible for this.

- Our products are carefully inspected and shipped after confirming that there are no defects. However, if there is a quality problem, please contact us.

Please contact us. At this time, you may have to send the product to us once. The above genuine parts are required.

If you do not do the work yourself, you can expect to incur labor charges, but we do not charge genuine parts and labor charges.

Please note that we cannot guarantee the warranty.

- Please keep this manual together with this product.
