

Hello Satya,

The results were amazing! There is no more NAPLs on the site!

I'm very impressed. I went to the site just a few days ago (11/02/2015). I was writing an e-mail to you when your e-mail came in.

We have done some test's with the product in your office but it didn't work.

When we did the test on the field the results were great because there is no more NAPLs on the site. Moreover there was a well with 10 cm of NAPLs and today there is nothing.

The first injection was on 18/12/14 in less than two months there were no more NAPLs on the site. I have never seen something like that on a bioremediation process because it is too fast. Moreover have never seen a bacteria eat NAPLs directly.

I'm very happy about everything.

The only thing that we did that may have accelerated the process were air injection inside the wells.

I'm looking forward to buy more products and use it on other clients. How much is the bucket today?

I will have the samples results in about one month (end of march and beginning of april).

Thank you very much!
