INSTALLATION TIPS

Part Number: **SUS 901 341 005 PMS**

VR: 01-2021

Congratulations, you have acquired a Patrick Motorsports designed suspension part! This set is specifically developed and refined throughout the years to offer best overall fit and performance.

Description:

Front Lower Control Arm Bearing Bushing Set - Early - (1965-1969) PORSCHE 911 / 912 - Sport / Motorsport Semi-Solid Type - Machined Delrin® - PATRICK MS USA

- + 4 Piece Set / 1 Set Per Car
- + Installs onto Parts: 901 341 005 00 / 901 342 006 00 - Control Arm Left/Right
- + Extremely durable, self lubricating with Teflon® & will not squeak.

PORSCHE did not offer replacement bushings for the front lower control arms but instead they offered entire replacement arms inclusive of newer rubber bushings. These parts are specially developed to replace the original equipment rubber with a hard plastic material known as Delrin® while re-using the original control arms.

Installation:

Due to older, original stamped steel part irregularities and wear, proper fitment may require some conditioning. This set has a front and rear with a groove indicating REAR bushings. The parts should first be confirmed by test fitment. The bushings should move freely without binding on the bushing inner bore and control arm shaft. The outer of the bushing should have an interference fitment and should not spin in the housing. The bushings may need a slight hone / polish to achieve proper fitment. If required, we suggest a light preparation of the control arm at both ends using an abrasive flapper wheel attachment.
