

VALVES AND CARTRIDGES CATALOG

Premium Valving Technology Since 1986

Effective November 19, 2023

Premium Valving Technology

Since 1986

State-of-the-Art American, German, French, Italian, and Hungarian Components

Our premium thermostatic valves are engineered to the highest standards for precise temperature control, performance, comfort, and safety. Our industry-leading valves exceed uniform plumbing codes, are ICC-ES and CSA B125 certified, and UPC listed in USA and Canada.

Our proprietary thermostatic valving brands are Sigmatherm®, Eurotherm®, Simply Safe®, E-Mini, and Butler Mill and Brassworks.®

We design and specify our valving, then partner with the finest technical manufacturers in Europe and USA. Our faucets utilize premium valves and cartridges from these leading brands.

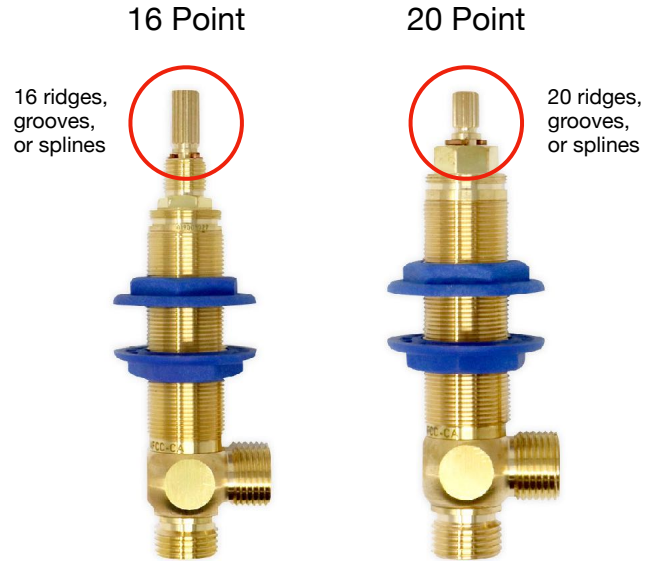

Performance

- Unleaded lavatory sets that exceed NSF 61-9 sanitary standards and California Title 54 requirements.
- Certified and listed by ICC
- Exposed thermostatic systems in all sizes.
- Solid brass construction is the foundation our faucets are built upon.
- Valves are machined in the United States of America using CNC computer-driven lathes and mills.
- State of the art ¼" turn ceramic disc cartridges with lifetime warranty.
- World's finest thermostatic systems – ½", ¾", 1 ¼", 1 ½" and 2" sizes for residential; 2", 3", 4" and 6" for commercial.
- ½" and ¾" thermostatic valves have the highest flow rates in the world: dual exit ½" at 15 gpm, dual exit ¾" at 32 gpm.

Operating Information

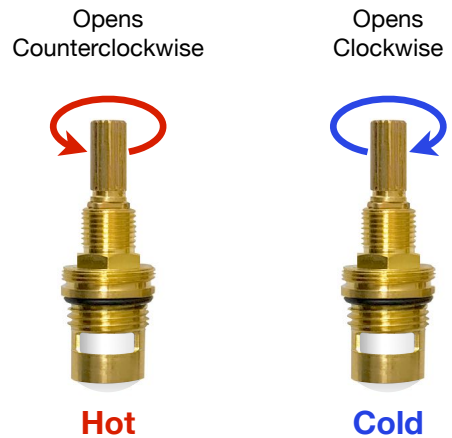

16 Versus 20 Point Valves and Parts

Our valves, cartridges, and related parts are offered with 16 and 20 points (ridges, grooves, or splines). The number of points of a cartridge or stem must equal the number of points in the faucet handle, so they fit together.

Hot Versus Cold Volume Control Cartridges

A hot volume control cartridge is the same as a cold volume control cartridge, except that it opens in the opposite direction. A hot cartridge opens or turns on the water by moving in the counter-clockwise direction. A cold cartridge opens or turns on the water by moving in the clockwise direction.

All flow rates comply with Department of Energy's standards and regulations.
