

## **BlOWash : Mould Remover & Cleaner**

### **Description:**

**Biowash** Mould Remover and Cleaner is a low toxicity product, designed to kill moss and mould and to allow Nature's elements to remove the surface contamination.

### **Dilution:**

Mix one part Biowash with six parts water. The application strength may be increased to a maximum one part to 4 parts water if growth is particularly heavy. A second application, after the drying of the first application produce the most effective result.

### **Application & Process:**

After dilution use a hand held or garden sprayer. Avoid spraying if rain is expected within 4 hours. The treated surface will clear progressively over time, with thickly contaminated areas taking several months. A further application after three months will assist in more rapid removal. The use of a brush on badly contaminated areas after two weeks will assist in breaking down the contamination. Disconnect tank water if using on a roof application. Allow up to 10mm rain and 3 weeks before re-connecting. Periodic treatment of the surface areas after removal will help prevent the contamination returning.

### **Handling & Safety:**

It is recommended to wear protective equipment including gloves, safety glasses and other protective clothing and these should be washed immediately after use. Spray in well ventilated areas and avoid inhalation of vapour. Store unused Biowash in a safe area.

### **Keep out of the reach of children:**

Keep pets away until dry. Wash contact areas with water.

### **Health and Safety:**

Please refer to Material Safety Data Sheet before using

**First aid:** Eyes and skin – wash with large amounts of fresh water.  
If swallowed – drink 2-3 glasses of water and seek appropriate medical advice.

### **Spillage and Disposal:**

Use rags or sawdust to contain and then dispose of through a commercial waste disposal organisation.

**Contains:** Approx 48grams p/ltr of dodecyl dimethyl ammonium chloride & 72grams p/ltr of Benzalkonium chloride
