

ABT PVA CONCENTRATE

ABT PVA CONCENTRATE is a 10% concentrated solution used as a surfactant when added to Lactated Ringers or Hartmann Saline Solution. PVA's surfactant properties help prevent embryos from sticking to tubing, filters or dishes after collection. This product is an alternative to BSA concentrate but does not require refrigeration. It is packaged in a 20ml EVA bag and at 4ml/Liter, it is the same concentration of surfactant as ABT's Complete Flush.

This product was tested at Colorado State University during the 2018 breeding season where no embryos stuck to the petri dish when PVA Concentrate was used compared to 30% of embryos sticking to a petri dish where a surfactant was not present.

ABT products are all manufactured in a cleanroom environment and go through strict quality control practices ensuring consistency and quality from lot to lot.

- Animal origin free & 100% traceable components
- Tight quality control standards equal consistent results
- Durable EVA packaging non-latex needle septum removable cap
- Made in the USA with two decades of experience
- latex needle septum removable cap
