■ Lubrication

Grease gearing, clutch system parts with a quality light-grade grease. Oil spool shaft ends, worm track gears, ball bearings and bushing. (However, do not oil MAG SEALED ball bearing.)

■ Warranty

Daiwa will repair or replace any Daiwa reel which proves defective in workmanship or materials within one year from the date of original purchase. This warranty gives you specific legal rights and you may also have other rights which vary from state to state. Retain your sales slip as proof of purchase date. In the event warranty work becomes necessary, this warranty does not cover lost parts, malfunctions or damage due to abuse, accident or normal wear, or cleaning or relubrication required due to owner's failure to provide reasonable and necessary maintenance. Repairs to your Daiwa reel due to abnormal use, modification or beyond the warranty period are available for a reasonable charge, from Daiwa's Factory Service Department.

■ Warranty Repairs and Service

Daiwa reels needing warranty work should be sent postage prepaid to Daiwa's Factory Service Department. If repairs beyond the terms of the warranty are required, we'll make them for a reasonable charge for parts and labor. An invoice will accompany the repaired reel when it is returned to you. Non-Warranty repairs on Daiwa reels can also be had at any Daiwa Authorized Service Station nationwide.

■ Parts Orders

Your parts list shows all parts numbers for your reel. Order parts by REEL MODEL NO. and PART NO. after identifying the needed parts on the parts list. Include both numbers for each part with your order. Send order to the Daiwa Factory Service Department. You will be advised of parts prices before shipment.

■ Note

The above conditions apply only to rods and reels purchased in the U.S.A. or Canada. Please contact your local distributor for warranty and repair service conditions for rods and reels purchased in other countries.

■ Precautions

- It is recommended that you wash the reel with water after use.
 - Tighten the drag and then wash the reel with freshwater for between one and two minutes.
 - Detach the spool, and wash it with water. (If you attach the spool to the body of the reel while it is wet, the motion of the spool pulley will be adversely affected. Before installing the spool, wipe away all traces of moisture on it.)
 - Wipe away moisture, tighten the drag, and then allow the reel to dry in a location that is not exposed to direct sunlight.
- If the worm shaft or pillar is dirty, remove the dirt with a cotton swab, or the like.
- Please do not leave grease or oil on the surface of the handle knob for long periods of time, as this may cause it to swell or change shape.
