

Goji Berry

Planting & Growing Guide

Questions? Contact us at (888) 784-1722 or helpdesk@groworganic.com

Goji plants are quite adaptable, but will grow best if provided the most favorable conditions. They prefer soil with a pH between 6.8–8.1 (use oystershell lime to raise your pH, and sulfur to lower pH). Both indoors and out, gojis require a sunny location. If temperatures reach 100°F or higher, afternoon shade is suggested. An inch or two of mulch will assist with moisture retention. Keep new plants moist, but not saturated. Once established, they are drought tolerant.

Berries can be harvested relatively soon. Container planted bushes may yield berries the first year, while those planted directly into the ground will need at least three years for full fruit production.

Gojis planted in the garden can grow to 10' high and 4–8' wide so plan wisely! Those grown in containers will be controlled by the depth of the pot since the height of the bush will cease to increase once the roots hit the bottom of the container.

HEELING IN

When your bare root goji (or potted goji) arrives, open the plastic bags immediately. It is best to plant right away, within a week of delivery, however if you cannot plant right away, you may “heel in” the plants to protect them and keep them alive (but still dormant) until you are able to plant them in their permanent spot.

Outdoors: To heel in bare root plants outside, pick a location that is shielded from wind. Dig a trench about twice as deep as the roots are long, with one side of the trench sloping at a 45° angle. Cover the roots with soil or sand and gently tamp down to avoid air pockets. Periodically check the root area, keeping the soil moist.

Indoors: To heel in bare root plants indoors, whether due to snow or a frozen ground, choose a cool place like a root cellar, basement, or garage. It's important to choose a place where the temperature stays between 38°F and 45°F. This is important so the goji's roots neither freeze, nor do they break dormancy. Place the roots in a container with soil or sand and be sure to keep the root area moist. See our “Heeling in Bare Root Trees” video for more details.

PLANTING & GROWING

Ideally, gojis should be planted soon after delivery. A potting mix of 1/3 sand to 2/3 good quality potting soil provides the best medium for growth and drainage. A 5 gallon container is sufficient for container grown plants. If you're planning on transplanting them into the garden, they may be started in 4–6" peat pots. Peat pots can be planted directly into the ground so that the roots are not disrupted during the transition.

It may be difficult to tell the top from the root of your goji berry plant. The root end may be slightly darker and rough, while the growing tip will be smoother and possibly grayish in appearance. If you are still unsure you may lay the roots sideways and cover them lightly with soil to see which end sprouts.

Plant your goji berry plant with the crown (the point where the root starts) at soil level. Water and push up soil as it settles to achieve the correct depth. Avoid fertilizing with high nitrogen as this can lead to excessive vegetative growth.

Important Information

- **If your gojis arrive damaged**, take photographs and contact us immediately and we will provide you with a refund of the purchase price, or a replacement.
- **You should plant your gojis in the ground by April 1st.** If you are unable to do so, you can plant it in a pot or “heel in” your gojis until you are able to plant.
- Bare root gojis ship in dry shavings to prevent mold from growing in transit.
- Bare root gojis look like a twig! Some may not even have visible roots. Please do not be alarmed, this is normal.
- **In the rare event that your gojis do not leaf out by May 15th**, we offer a Limited Guarantee on dormant plants. See the last page for details.

PRUNING

Since gojis are vigorous growers and tend to grow in a “weeping willow” fashion, you will eventually want to prune your bushes. Substantial pruning should be done during the winter months, while judicious snipping can be done throughout the growing season to shape or improve berry yield. Do not prune heavily the first year. When the plant reaches 2' in height, prune all the bottom branches up to 15" from the soil and pinch out growing tips to create a bushier appearance. Ineffective, non-bearing branches that appear straight and smooth and grow rapidly may be removed. Regular pruning will help maintain gojis as attractive bush, hedge, trellis or container plants.

Limited Dormant Tree & Plant Guarantee

*** Claim deadline is June 15th**

We guarantee that your dormant tree or plant will arrive in good, viable condition. If your tree arrives in substandard condition, notify us within 3 days of delivery. Please email pictures of the box, inside packaging, the tree and its roots to helpdesk@groworganic.com. We will investigate your claim and process a request to exchange or refund the damaged product.

If your dormant tree or plant has not grown new leaves by June 15th, you may be eligible for our Limited Dormant Tree & Plant Guarantee. This guarantee provides for a store credit for the purchase price of the tree, excluding shipping. Please see the Instructions below.

Important Dates:

- April 1st Dormant trees/plants must be planted in the ground
- May 15th Perform scratch test, if no new leaves have grown
- June 15th Deadline to apply for a dormant tree/plant credit

All required documentation must be received by June 15th for your claim to be considered. Claims or documentation received after June 15th will be denied, without exception. Instructions listed below

Terms and Conditions

We cannot guarantee that your tree or plant will remain alive and healthy after it is received, or bear fruit as there are too many variables in your environment that are beyond our control (i.e. soil preparation, weed and pest control, proper irrigation, chill hours, compatible hardiness for your growing zone, proper choice of pollinator, extreme weather, rodent damage, disease, etc.).

We cannot guarantee that we will be able to provide a replacement tree/plant of the same species either that same growing season or in future years. Customers are responsible for all shipping fees associated with replacement trees and plants.

If we determine that the tree you purchased directly from us is not viable, we will issue you a store credit (not a refund) for the purchase price of the affected dormant tree or plant. Shipping is not included in the dormant tree/plant guarantee. Store credits can be used to purchase any product we sell and are valid for use only until July 1st of the following year.

Historically, 98% of our dormant trees and plants grow and thrive when they have been cared for and planted using our growing guides. Dormant trees and plants must be planted in the ground by April 1st in order to be eligible for credit. If the ground in your area is still frozen solid, you may temporarily plant your tree or plant in a pot.

Potted, non-dormant trees or plants are **excluded** from this guarantee as they are not dormant at the time of shipment. Evergreen trees such as citrus, avocado and olive trees are not available for credit under the Dormant Tree and Plant Guarantee.

Instructions

We guarantee that your dormant fruit tree or plant will leaf out, if you care for it according to our growing guides. In the unlikely event that your dormant tree or plant does not have leaves by May 15th, follow these simple steps to apply for a store credit:

Before you call or email, please perform a "scratch test" to determine if the tree or plant is still alive. This video shows how to check for live tissue under the bark. Scratch tests need to be done a few inches above and below the graft.

Green Cambium Layer—Living Trees/Plants

If the cambium layer under the bark is green, give your tree a little more time. It is still alive, but hasn't come out of dormancy yet. Check to make sure that it is getting the right amount of deep root water, enough sunlight and that the weather is warm enough for that type of tree/plant to come out of dormancy. Every tree has its own personality and will come out of dormancy at different times. Be sure to submit the required documentation listed below by June 15th, if it doesn't grow leaves.

Brown Cambium Layer—Dead Trees/Plants

If the scratch test shows a brown cambium layer or if your dormant tree/plant doesn't have leaves by June 1st, please email us at helpdesk@groworganic.com. All required documentation listed below must be received by June 15th for your claim to be considered. To be considered for the guarantee claim, all required documentation must be received by June 15th. Incomplete submissions will be denied.

Required Documentation

1. Order number
2. Name of dormant tree/plant and the quantity affected
3. Photos of each tree or plant showing: The roots (tree or plant must be pulled out of the ground), the scratch test areas, the entire tree/plant

We reserve the right to not issue credit for items that have already been replaced. We also reserve the right to require photographic evidence that the tree/plant was not killed by root rot, rodent or mechanical damage.

Return Policy

Perishable Items (3-Day Return Policy)

We guarantee the perishable items we sell to be in good, viable condition when we sell them. Perishable items include, but are not limited to, garlic bulbs, flower bulbs, seed potatoes, onion sets & transplants, bare-root trees, vegetable crowns... etc. If your perishable item arrives in substandard condition, please contact us within 3 days of the purchase date (or delivery date) and we will provide you with a refund of the purchase price (including shipping costs), or a replacement. Accordingly, we urge you to open any boxes marked as "Perishable" immediately upon receiving them. Because some perishable items can deteriorate very quickly, we cannot accept any claims beyond the 3-day time frame as it becomes too difficult to determine if these items were delivered in substandard condition, or if they turned into such substandard condition because of having been improperly cared for or stored once delivered.

Limited Product Guarantee

Limitation of Remedy

We warrant to the extent of the purchase price only that the seeds or plants sold hereunder are as described on the label within recognized tolerances. No other warranty is given, expressed or implied, of (1) the merchantability or fitness of the seeds or plants for any particular purpose, or (2) against loss due to any cause. We cannot accept any responsibility for the many uncontrollable growing and climatic conditions (soil preparation, fertilization, weed and pest control, temperature control, irrigation...etc.) that must be met to insure the success of your crop(s) or plants.
