

## Fork Wrap Turn Signals

### **THANK YOU!**

Thanks for purchasing the Taco Moto Co. Fork Wrap Turn Signals!

The installation instructions are on YouTube, just search "**Installation of the 360 Fork Wrap turn signals**", or scan this QR code with the camera on your phone to open it up automatically.

When spreading the signals apart to ease them over the forks **\*\*take care to do this slowly and carefully\*\*** so as to not let them 'snap' closed around the fork once they're on. We've also found it's helpful to do this at warmer temperatures above 65°F or so. The lexan tube is very strong but flexing it in the oposite direction of the bend when it's very cold is a stress it can only take so much of.

Be careful, slide them over the narrow top part of the fork and you'll be fine.

With an LED signal and flasher relay upgrade we've found that some bikes will flash all 4 signals like hazard lights. If that happens to you, remove the small incandescent flasher indicator bulb. You can either ditch that and run the bike without the indicator bulb, or use one of our 'Flasher Indicator Harness' units to correct this and get the flasher indicator back as normal with your new LED signal system.

Thanks again for purchasing our product and please don't hesitate to let us know if you have any questions.

Your brother in braaaaaaap,

Taco Mike 702-812-6626
