# BIOLOGICAL MAINTENANCE

## WHAT IS THE PRINCIPLE OF BIOLOGICAL PARTS WASHER?

- 1 THE BIOLOGICAL PARTS WASHER**  
 Heated and oxygenated equipment containing the cleaning solutions and micro-organisms.
- 2 THE CLEANING SOLUTION**  
 Water based solution containing surfactants that basically unstick the grease.
- 3 MICRO-ORGANISM TABS**  
 Especially selected to biodegrade hydrocarbons and regenerate the solution.

## CLEANING PROCESS

The cleaning solution is made up with specific surfactants for an industrial maintenance. They will basically unstick any kind of pollution like grease, hydrocarbures enabling the solution to regenerate itself.

## INTERESTS OF THE PROCESS

- Continuous regeneration of the cleaning solution
- Lifespan of the solution
- Minimize waste
