# LOLO PRESETS

Your installation guide for singe file mobile preset download that can be used with the free Lighroom app on your phone!
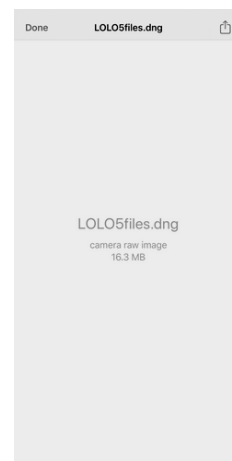

LOLO PRESET STEP BY STEP GUIDE

First off, please make sure your Lightroom CC mobile app is downloaded and updated so that everything goes smoothly. Remember to hashtag #lolopresets when used so I can see how great your images look!

Step 1. Once you click download on the DNG file, it will open on your phone as a blank "camera raw image"

Step 2. Click on the box in the upper right hand corner and select "save image"

Step 3. Open your Lightroom app and click "add" in the bottom right corner, then select "from camera roll"

Step 4. Select the blank image from your camera roll. It will upload into your lightroom app as a photo.

Step 5. Click on the circle with the three dots in the upper right corner. Then select "create preset" This is where you will name the preset and then click the checkmark.

Step 6. Click on "presets" at the bottom (you may need to scroll over.) Your new preset will now be saved under "user presets"

Step 7. Your preset will now be saved and you can import any photo and edit with your new preset!

Remember, depending on how you've shot the image, you can always play with the exposure tab after you've applied the preset to brighten or darken the image slightly! I also adjust the "temperature" bar occasionally for more or less warmth! Making those slight adjustments can really make a worlds difference!
