

How to Install Large Sculptures

Outdoors:

When hanging any metal sculpture outdoors, always use stainless screws, hooks, bolts, and fixtures to prevent rust and deterioration.

On Wood Siding:

Use stainless hooks and screws.

On Brick & Mortar or Concrete Siding:

Drill and install lead or plastic anchors using epoxy glue to secure. Allow this to dry thoroughly. Use stainless steel screws or stainless hooks to hang.

Indoors:

On Wallboard or plaster:

Hang where studs are located. A board spanning between joists can be fixed to the wall before hanging the sculpture.

When hanging a large sculpture and studs are not behind the chosen place, using wall anchors is preferred.

Consult your contractor or hardware store for the best hardware for your particular wall construction.
