

How to Care for Your Eyewear

Keeping safety eyewear clean and scratch-free not only keeps workers seeing clearly, but it extends the life of the product as well - resulting in significant cost savings for companies. Our proprietary coatings are chemically formulated to perform differently than any other coating on the market, so using standard,* alcohol-based cleaner on them can cause damage. For this reason, we've created specific cleaning supplies to ensure our TruShield® coatings continuously perform to the highest standard.

Follow these simple care and cleaning steps to increase the life of HexArmor® safety eyewear:

- 1 Lightly blow off any loose dirt or debris from your lenses.
- 2 Rinse your lenses with cool water. HexArmor® eyewear is engineered to have excess dirt cleanly wash off the lens without sticking.
- 3 At your HexArmor® cleaning station, spray the cleaning solution directly onto the lenses.
- 4 Use a lens-safe tissue (provided at the HexArmor® cleaning station) to dry and wipe clean.
- 5 If you're not immediately putting the safety eyewear on, store it in a safe spot or in a pouch or case. Never put unprotected safety eyewear in your pocket.

If a cleaning station is not available, use a soft, dry microfiber cloth to gently wipe your lenses.

In addition to properly cleaning, check your safety eyeglasses before you put them on to ensure that the lenses and frames are intact. If anything is defective, replace immediately. Inspection is the first line of protection.

* Using any anti-fog wipes, alcohol-based cleaners or any other non-HexArmor® product on TruShield® lenses can cause damage.
