HAND CRAFTED FOR AN ARTISINAL APPROACH

The Perfect Match

There's so much more to flooring than the floor itself. It's the seamless details and how they come together that speak to the workmanship. Airwood custom manufactures our Matchable moldings from prefinished hardwood floor, so every product matches your floor's colour, texture, and finish.

- Easy to install
- Elevated luxury and custom look
- Structurally stable and durable

Unparalleled Contemporary Design Details

EURO NOSING

Contemporary Euro Nosing, made entirely from prefinished hardwood flooring, amplifies the custom look of your installation. This molding can be installed on an entire staircase, or to finish off the top step or landing. The same bevels and joints you find in your hardwood floor are possible, depending on the length of the nosing. Since the nosing is made from the floor, it matches the texture, colour and lustre of your floor exactly.

Traditionalist Design Details

ROUND (BULL) NOSING

Traditional round nosing is made using a plank of the hardwood and adding a J-cap to the plank. The J-cap is stained and finished a coordinating colour. Since 95% of the molding is made from the prefinished hardwood floor, it has the same texture, colour, and lustre as the floor. Bevels and joints are possible, depending on the length of the hardwood floor.

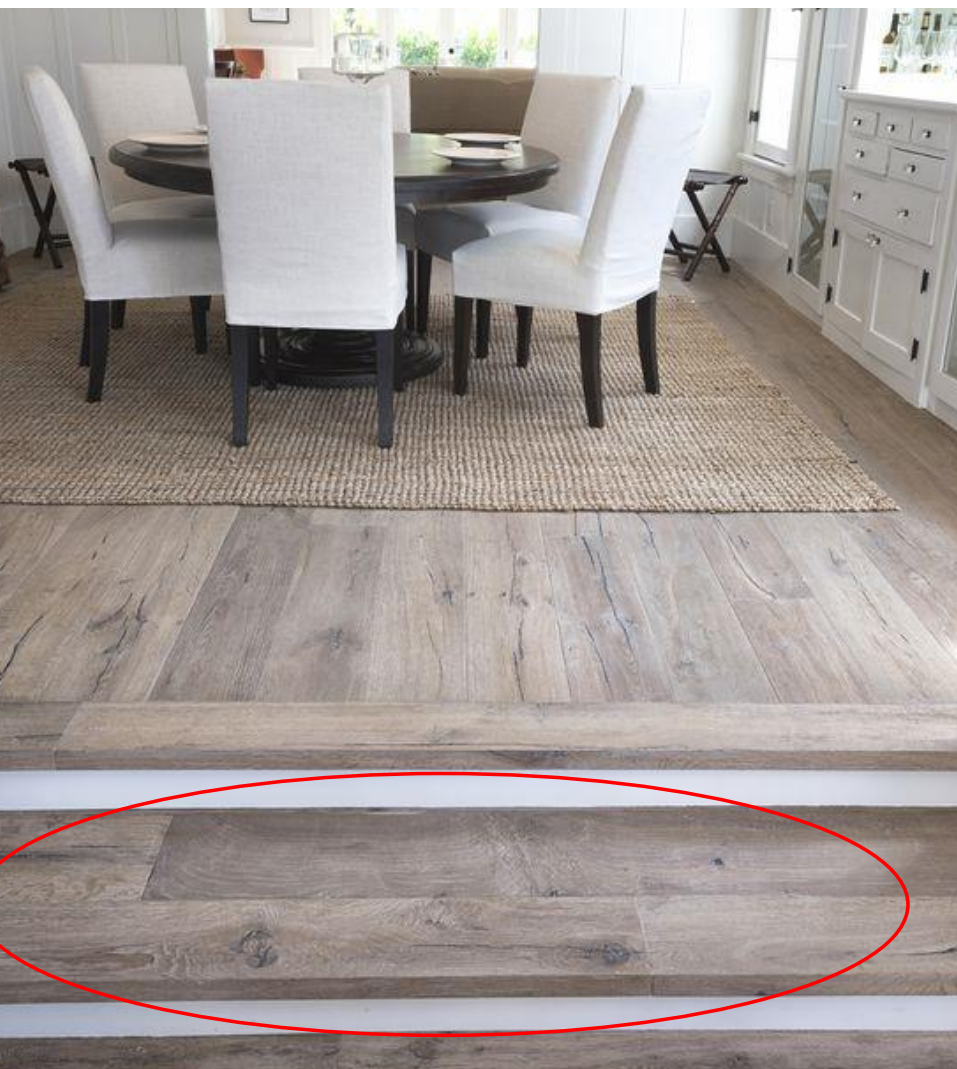

T MOLD

Used to join two floors of the same height in adjoining rooms, often in a doorway.

REDUCER

Used to join two floors of varying height in adjoining rooms, often in a doorway.

MOLDING JOINTS AND SEAMS

- Joints are made with the factory bevel of the hardwood
- They blend in once installed with the floor
- Be sure to feather joints across stairs
- Joints are staggered
- Once installed they become part of the floor and the overall custom look

STANDARD SIZE HVAC FLUSH MOUNT WOOD VENT

A truly artisan product hand crafted in all standard HVAC sizes. These wood vents are carefully crafted to enhance the look of your hardwood floor. Although they are meant to disappear in your floor, the craftsmanship and attention to detail will stand out.

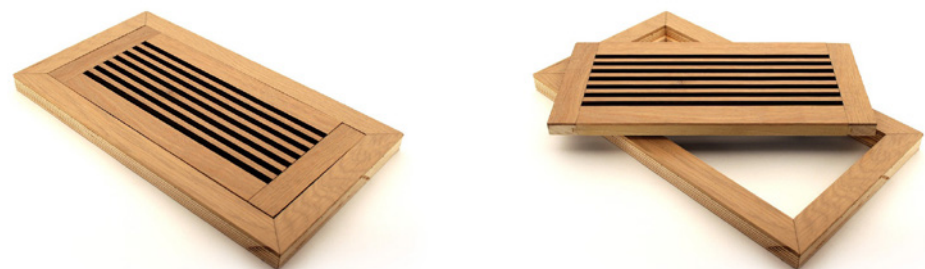

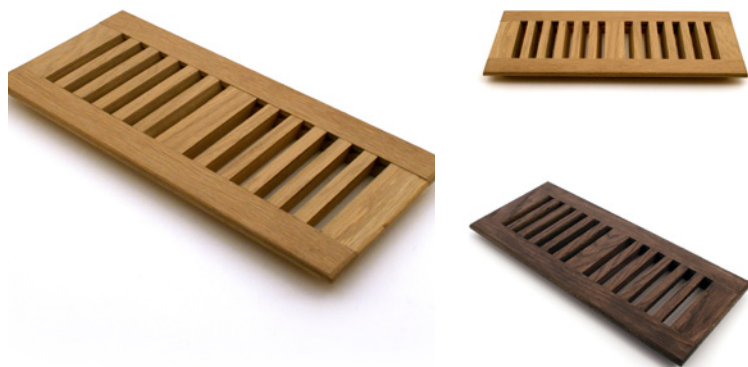

LINEAR VENT WITH FRAME

The linear vent is a great option for cold air returns, or a minimalist modern look. This vent can be made in standard or custom sizes. Product can be installed with or without a frame depending on the desired look of the home.

**linear vents are for aesthetic purposes only and are not weight bearing or suitable for foot traffic.*

A product for those tight on time, ease of installation or looking to reduce costs from installation.

URBAN TOP MOUNT (SELF RIMMING)

A truly artisan product handcrafted in all standard HVAC sizes. These wood vents are carefully crafted to enhance the look of your hardwood floor. Urban Top Mount vents require no installation, they simply drop into the boot of the HVAC system.

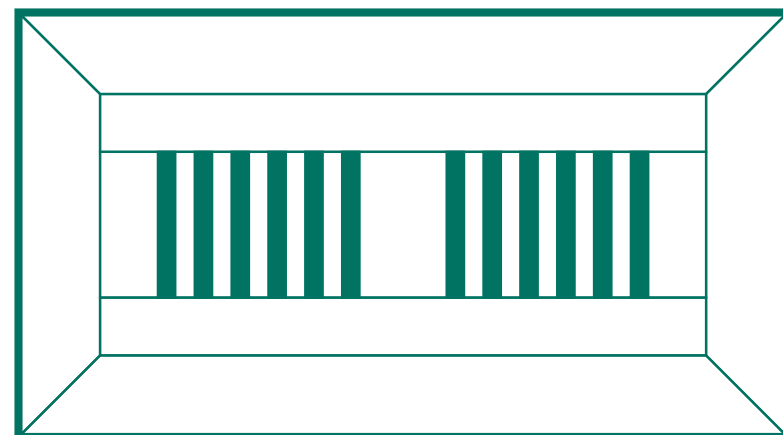

STANDARD SIZE HVAC

Flush Mount Wood Vent

- 1/6" template
- Feather like boards around vent
- Custom size in linear

How to factor material requirements

AIRWOOD FOLLOWS THESE PRACTICES

- We will always try to maximize your material yield to keep your costs low
- We do not cut character out of the planks. If you have knots in your floor, those knots will be in your nosing or vents.
- To achieve the maximum yield of your hardwood, a staggered joint with factory bevel will be in your nosing. If you don't want joints, you'll need to supply material slightly longer than the finished size.
- We manufacture standard lengths in either 48" or 78"

EURO NOSING

- The plank length will be the length of the nosing.
- For a 78" nosing, select an 80" plank or 2 planks that equal 80" (finish size of 78")
- For a 48" nosing, select a 50" plank or 2 planks that equal 80" (finish size of 48")
- To achieve a 4 ¼" face, the ideal plank width is 7". For instance (1) – 7" wide by 80" long plank will make 1 full Euro Nosing
- If your plank is narrower than 7" you'll need to send double the plank lengths above. For instance (2) – 5" wide by 80" long plank will make 1 full Euro Nosing.
- Custom lengths longer than 86" are not available. If you need custom long lengths, we recommend joining (2) nosing together at the job site.

How to factor material requirements

WOOD VENTS

- To achieve maximum product yield for flush vents 2 square feet of material per vent is required.
- Planks cannot be cut smaller than 36" and Airwood is unable to use shorts, or off cuts from the job site.
- If you required 10 flush vents, you'll send 20 square feet of material.
- To achieve maximum product yield for Urban Top Mount vents, 1 square feet of material per vent is required.
- If you only require a few vents, you can send (1) - 5" wide by 36" long plank per vent.

LINEAR VENTS, ROUND NOSING, T-MOLD & REDUCER

- Contact the order desk for a material quote
- T-Molds and Reducers can often be made out of off cuts from nosings to further maximize product yield
