How to fix a lost connection for uploads to Philips SpeechLive

The issue:

The SpeechLive Upload Client requests a SpeechLive login when user is already logged into SpeechLive

Did you know?

In order to automatically upload supported audio files (ds2, wav, mp3) from a voice recorder **and** have the files deleted from the recorder after upload, a user must have *the SpeechLive Upload Client software* installed and paired with SpeechLive via a connection code. The user must also be logged into their SpeechLive account.

In some cases, when Microsoft applies patches to their Azure Servers a previously paired SpeechLive Upload Client can lose its connection code.

Scenario:

- The user has been successfully uploading dictations via the SpeechLive Upload client for some time.
- The user is currently logged in to a supported browser with his SpeechLive account
- The user attempts to upload dictations via the SpeechLive upload client and is presented with the message:

- The icon for the SpeechLive Upload client running in the system tray now has a red "X" indicating it is no longer paired to SpeechLive with a connection code,

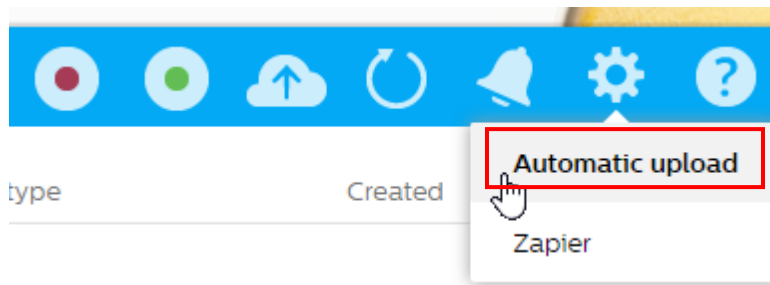

Solution:

From SpeechLive running in the browser

1. Click on the Settings icon
2. Choose <Automatic upload>

3. Select <Connect> to generate a new connection code:

Install client for automatic uploads

Click the 'Download' button below to download and install the client that automatically uploads your dictations.

Download

Already installed?

To connect the upload client to SpeechLive, click the 'Connect' button below.

Note: Make sure only one voice recorder is connected to your computer.

Connect

4. Click <Copy> to place the code on the PC clipboard

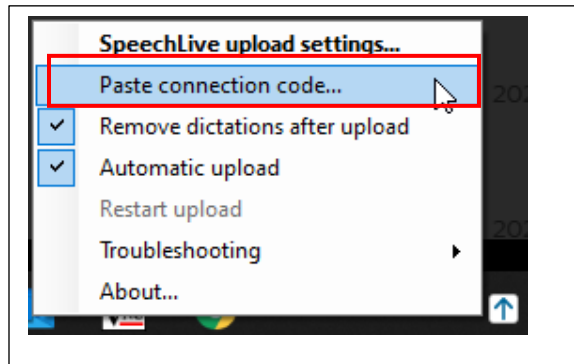

Copy the connection code to the clipboard

Connection Code: CA923D7D1894E946BEA4A2036968A71224

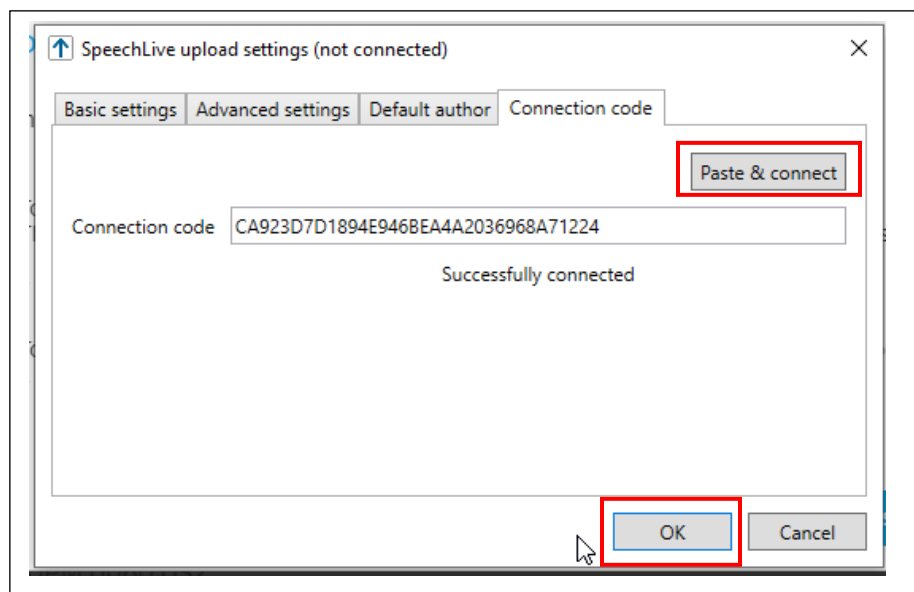

Copy

5. Locate the SpeechLive Upload Client in the system tray
6. Right-click the icon to show the menu
7. Select *<Paste connection code...>*

8. Click *<Paste & connect>*
9. The code is applied, and you should receive a "Successfully connected" message
10. Click *<OK>* to dismiss the dialog

11. Close the "Copy the connection..." dialog

Copy the connection code to the clipboard

Connection Code:

1. To copy the connection code to the clipboard, click the "Copy" button.
2. Then double-click the SpeechLive upload icon in the notification area of the Windows task bar. The "SpeechLive upload settings" window opens. 
3. To paste the connection code, click on the "Paste & connect" button in the Connection code tab.

The SpeechLive Upload Client is now ready to use!
