## CORRADO 70MM FRONT LIP PAINT GUIDELINES

This product is made of durable urethane which can easily be painted. The lip is shipped folded and once unpacked should be left in the sun for 15 minutes. The sunlight will help restore the lip to its original shape. Before painting, the lip should be cleaned with a automotive paint prep cleaner such as SEM Solve or an equivalent cleaner will remove any wax or oils from the surface. Lightly sand with 400 grit sand paper or a Scotch Bright pad. Adhesion promoter such as Bulldog is recommended as a primer. If a textured finish is desired, SEM Texture Coat can be used. For a satin black finish we recommend SEM Flexible Bumper Coat. Please follow all manufacturers directions for applications of their products.

Thank you for your business!
