## CORRADO BADGELESS GRILLE PAINT GUIDELINES

This product is made of durable urethane which can easily be painted. The grille is shipped raw and unpainted. If a painted finish is desired the grille must be cleaned with a automotive paint prep cleaner prior to painting. SEM Solve or an equivalent cleaner will remove any wax or oils from the surface. Lightly sand the grille with 400 grit sand paper or a Scotch Bright pad. An adhesion promoter such as Bulldog is recommended as a primer. For a satin black finish we recommend SEM Trim Black or SEM Flexible Bumper Coat. Please follow the manufacturers directions for applications of their products.

Thank you for your business!
