## CORRADO WINDSHIELD TRIM INSTALL GUIDELINES

This product is made of carbon fiber composite with durable clear gel coat finish that has UV protection. If the surface becomes dull or scratched automotive or marine polishing compounds can be used. It can also be wet sanded with high grit sandpaper and polished if compound doesn't restore the finish.

To install the trim transfer 3 of the metal clips from the O.E. trim pieces onto the trim. 1 in the middle and the other 2 clips towards each end. The O.E. white plastic clips below the glass are no longer needed and it may be necessary to use a small dab of silicone in the middle of the trim to hold it tight to the glass. Once fitted to the car the 2 original screws install into their locations on each end of the windshield trim.

Thank you for your business!
