## CORRADO EURO PLATE HOLDER INSTALLATION

This product is made of high quality fiberglass composite. It has a black high-gloss gel coat finish. It can be polished if scratched using automotive or marine polishing products. The 4 threaded studs on the back with flange nuts and rubber washers are provided for mounting the plate holder using the existing in the rear hatch. The rubber washers should be left on the threaded studs so they rest in between the plate holder and the hatch. Only tighten the mounting nuts by hand, being careful not to overtighten them.

Thank you for your business!
