## CORRADO REAR WING INSTALLATION

This product is made of fiberglass composite with a gel coat finish that needs the surfaces to be prepped before painting. We recommend first applying a sandable primer/sealer and then block sanding the surface. The top surface may a skim coat of body filler and block sanding in order to achieve a perfectly smooth/flat surface. Make sure to mask off the threaded inserts on the bottom of the wing prior to primer and paint. When installing the original screws to mount the factory brackets use a hand screwdriver. Do not use a hand drill or over tighten the screws.

Thank you for your business!
