CORRADO US PLATE HOLDER INSTALLATION

This product is made of high quality fiberglass composite. It has a black high-gloss gel coat finish. It can be polished if scratched using automotive or marine polishing products. The 4 metal studs on the back are provided for mounting the plate holder using the existing mounting holes in the rear hatch. We suggest mounting the plate holder with the flange nuts loose and then install the inner tail lights before fully tightening the plate holder flange nuts. This will allow you to line up the plate holder with the tail lights properly. Only tighten the mounting nuts by hand, being careful not to overtighten them.

Thank you for your business!
