CORRADO WINDSHIELD TRIM PAINT GUIDELINES

This product is made of fiberglass composite with a durable gel coat finish. It should be painted prior to installation. Before paint the surface needs to be block sanded to knock down any surfaces imperfections. This should be followed with a high fill primer and block sanded again to achieve a smooth surfaces prior to paint. For a nice satin black finish we recommend SEM Trim Black paint.

To install transfer the O.E. metal clips from the 3 original plastic trim pieces to the fiberglass part. You may only need a few clips since the trim is one piece instead of three. The OE clips below the glass are no longer used and it may be necessary to use small dabs of silicone to get a snug fit to the glass. Once fitted to the car the 2 OE screws install into their original locations on each end.

Thank you for your business!
