Non-Invasive Prenatal DNA Paternity Testing

Non-Invasive Prenatal DNA Paternity Testing

- ✓ Are you unsure if you are the father of an unborn baby?
- ✓ Are you pregnant and a complicated situation lead to 2 men that are possibly the father of your unborn child?
- ✓ Have you recently been informed that a woman is carrying your child and you want a test that is 99.9% accurate?

Consolidated Lab Testing offers one of the most accurate and reliable non-invasive prenatal paternity tests available.

Key Facts

- ✓ **100% risk free** – There is NO chance in harming the unborn child as the mother simply provides a small blood sample from her arm by trained medical personnel and the alleged father(s) DNA sample is collected by a mouth swab.
- ✓ The Non-invasive Prenatal Paternity Test is 99.9% accurate, the same as the paternity test once the baby is born. To re-assure our customers, we provide at no cost, an optional paternity test with a sample collected from the baby after he/she is born for additional peace of mind.
- ✓ 9 Weeks into the pregnancy is the earliest a mother to have this test done successfully. At 9 weeks, there is a high enough level of the baby's **cell free** DNA in the mother's blood stream to be able to separate it from the Mother's DNA to conduct the paternity test.
- ✓ The lab offers a standard 2 weeks to return the results, but if time is an critical factor, a 1 week turnaround if offered for an additional fee
- ✓ If you choose, you can learn the sex of the unborn child along with paternity

Company Comparison

Turn around time to deliver the results	9 business days	7 business days	10 business days
Total Price for the non-invasive prenatal paternity test.	\$1,295	\$1,714	\$1,999

Is a Non-Invasive Prenatal Paternity Test Right for You?

There are so many things going through your mind right now. Whether you're a soon-to-be mom or dad, the questions are mounting. How are you going to care for your child? What kind of support are you going to receive? In cases with paternity issues or questions, these issues are even more prominent than when couples are together.

A prenatal paternity test provides an answer to the questions you have when you're unsure who the father of your unborn child is. You can learn the answers to many questions utilizing a non-invasive prenatal paternity test. If you're debating between two potential partners being the father, this test can answer the question with a DNA sample from the mother and alleged father(s). Additionally, if you want to learn the child's gender identity before giving birth, this test will let you know if you are going to have a boy or a girl.

For the potential father, you can learn whether you are the biological father to an unborn child. When selecting a paternity test, accuracy is the most important factor when deciding which test to go with. That's why we utilize the lab that has been doing the non-invasive prenatal testing for more than 20 years, and backup the results with a free paternity test after the baby is born, if there are any doubts.

We also understand time is important, not in just getting the results back but in your time to get the DNA samples collected, this is why we have a network of over 2500 locations available to ensure there is a facility to safely and professionally collect the samples to be sent to the lab for testing.

Some Of The Benefits Of Our Test Include:

- ✓ Confirm if the alleged father is the biological father or not.
- ✓ The ability to determine the father in cases where there are two or more potential fathers involved
- ✓ Men can learn whether they're the biological father if a former partner is carrying an unborn child
- ✓ The test is 100 percent risk-free and there's no chance of harming the unborn child
- ✓ Testing is simple, requiring only a small sample of blood from the arm of the mom, and mouth swab testing from the father.

The Test Is Non-invasive.

There are no difficult tests to complete or tough answers that you'll need to provide to questions you don't want to answer. The process is straightforward and requires only a small DNA sample to find out who the father is when questions arise. Another great feature we provide to our customers is a free paternity test after the child is born.

In addition to proving that our prenatal test is 100 percent accurate, this is another way to prove who the biological father of the child is. This will quash any questions outside parties might have if there is more than one potential father claiming parental rights. Our test is accurate enough to allow mothers to test paternity as early as nine weeks into their pregnancy. This provides both parents with peace of mind early on in the pregnancy.

How the Test Works:

There is sufficient free floating DNA from the unborn child available in the mother's bloodstream, at 9 weeks into the pregnancy, to provide accurate test results. With enough DNA available from mothers and the unborn child at this point, the testing process is error free with our simple process for collecting DNA samples. Our lab will return the results to you as quickly as possible. We process the DNA results within a two-week period and will send the results back to you within this time frame. If time is of the essence, we do offer a one-week turnaround processing time for this test. This, however, is going to result in an extra processing fee. See our blog [for more in depth information](#).

Another great feature of the non-invasive prenatal paternity test is the option to learn whether they're going to have a boy or a girl. For parties who choose to learn the sex of the unborn child, we can furnish these results to you with the paternity. This leaves little doubt as to the type of clothing and supplies you need to buy for setting up the nursery and planning for the baby shower.

Reasons Why This Test Maybe Right for You

There are many instances when you might need the answer to questions surrounding paternity before a child is born. In some cases, it is to learn who the child's father is if you want your child to know the answer to this question when they're older. This is important in cases where more than one individual can be the father of the child. Then, there are legal battles which need paternity results to determine parental rights and responsibilities. Whether it's a child support battle, custody issues, or a mother who wants the child's father to have custodial rights in the child's life, a paternity test is often necessary for a judge to levy these orders. Having the results beforehand can help settle disputes out of court. No one wants to bring the government into family issues.

No matter what the reason is for doing a prenatal paternity test, you want to ensure the results are 100 percent accurate. Our test is going to produce the accuracy you seek, and we stand behind our results with a free confirmation paternity test after the baby is born.
