## Example 1 : Finding the rate law

Using the table, find the rate law and rate constant.

$$
\mathrm{SO}_{3}+\mathrm{H}_{2} \mathrm{O} \longrightarrow \mathrm{H}_{2} \mathrm{SO}_{4}
$$

| Trial | $\left[\mathbf{S O}_{\mathbf{3}} \mathbf{]}, \mathbf{M}\right.$ | [ $\mathbf{H}_{\mathbf{2}} \mathbf{O}$ ], M | Rate M/s |
| :---: | :---: | :---: | :---: |
| $\mathbf{1}$ | 0.35 | 0.35 | 0.150 |
| 2 | 0.70 | 0.35 | 0.600 |
| 3 | 0.35 | 0.70 | 0.300 |
| 4 | 0.70 | 0.70 | 1.20 |

Step
Pick two different trials where one reactant's concentration stays the same and the other changes. Plug values into formula.

| Trial | [ $\left.\mathbf{S O}_{3}\right]$, M | [ $\mathrm{H}_{2} \mathrm{O}$ ], M | Rate M/s |
| :---: | :---: | :---: | :---: |
| 1 | 5 Changes ${ }^{\text {O. }} 35$ Same |  |  |
| 2 | 0.70 | 0.35 | 0.600 |
| 3 | 0.35 | 0.70 | 0.300 |
| 4 | 0.70 | 0.70 | 1.20 |

$$
\begin{aligned}
& \frac{\text { Rate 2 }}{\text { Rate } 1}=\frac{\mathrm{k}\left[\mathrm{SO}_{3}\right]^{x}\left[\mathrm{H}_{2} \mathrm{O}\right]^{y}}{\mathrm{k}\left[\mathrm{SO}_{3}\right]^{x}\left[\mathrm{H}_{2} \mathrm{O}\right]^{y}} \\
& \frac{0.600}{0.150}=\frac{\mathrm{k}[0.70]^{x}[0.35]^{y}}{\mathrm{k}[0.35]^{x}[0.35]^{y}}
\end{aligned}
$$

Step Plug in each value from the two chosen trials.
4 Cancel like terms and divide remaining terms.

$$
\frac{\text { Rate } 4}{\text { Rate } 2}=\frac{\mathrm{k}\left[\mathrm{SO}_{3}\right]^{\mathrm{x}}\left[\mathrm{H}_{2} \mathrm{O}\right]^{\mathrm{y}}}{\mathrm{k}\left[\mathrm{SO}_{3}\right]^{\mathrm{x}}\left[\mathrm{H}_{2} \mathrm{O}\right]^{\mathrm{y}}}
$$

$$
\frac{1.20}{0.600}=\frac{\mathrm{k}[0.70]^{\mathrm{x}}[0.70]^{\mathrm{y}}}{\mathrm{k}[0.70]^{\mathrm{x}}[0.35]^{y}}
$$

Solve for x by cancelling like terms and dividing the

remaining values.

$$
\begin{aligned}
& \frac{0.600}{0.150}=\frac{\mathrm{k}[0.70]^{\mathrm{x}}[0.35]^{\mathrm{y}}}{\mathrm{k}[0.35]^{x}[0.35]^{y}} \\
& \text { Divide } \\
& \begin{aligned}
4 & =2^{\mathrm{x}} \\
\mathrm{x} & =2
\end{aligned}
\end{aligned}
$$

Repeat step one with two other trials but solve for $y$ now.

| Trial | [ $\left.\mathbf{S O}_{3}\right]$, M | [ $\left.\mathrm{H}_{2} \mathrm{O}\right]$, M | Rate M/s |
| :---: | :---: | :---: | :---: |
| 1 | 0.35 | 0.35 | 0.150 |
| 2 | 0.70 | 0.35 | 0.600 |
| 3 | 0.35 | $\begin{array}{\|c\|c} \hline \text { Same } 0.70 & \text { Changes } 0.300 \\ 0.70 & 1.20 \\ \hline \end{array}$ |  |
| 4 | 0.70 |  |  |

Answer: Rate $=k\left[\mathrm{SO}_{3}\right]^{2}\left[\mathrm{H}_{2} \mathrm{O}\right]^{1}$
