

DHM 2022+ High Compression Stock Bore Piston Kit

This piston will require at least 91 octane fuel (93 is even better if available)

****Requires NGK CR9E (6263) spark plug**

Install tips:

- **Set ring end gaps during installation, recommended .007-.008" for the top silver ring and .008-.009" for the lower black ring.**
- **Use the metal basket PLUS the paper gasket when running pump fuel. On race fuel you can use only the metal base gasket**
- **Since pistons are packaged immediately after machining, we recommend cleaning the piston thoroughly before assembly**
- **Lube the piston skirts with oil before inserting the piston**
- **Do NOT install this piston without a fuel controller or ECU flash! If using an aRacer ECU, remove 3* of ignition timing from the entire map as a starting point and then fine tune from there.**

If you're satisfied with the purchase, please consider leaving us a review on the website or on our Facebook page, most of our business is referred from customers like you!

If you have any questions or concerns, please contact us and we'll get it sorted out for you asap. info@dhmotoring.com
